1. How it works

Three apps work together:

App	Who uses it	What it is for
Agent app kongossapayagent.com	Agents (shops, cash points)	Start and end the business day, take cash in, give cash out, help customers send money, follow commission.
Customer app kongossapay.com	Customers	Start a cash-out at an agent, approve or reject transfers an agent prepared, see history and receipts.
Admin panel (Agent CRM) kongossapay.com	Kongossa Pay staff	Set each agent's limits, see an agent's cash inventory and day history, credit or debit an agent's wallet.

The rules behind every transaction

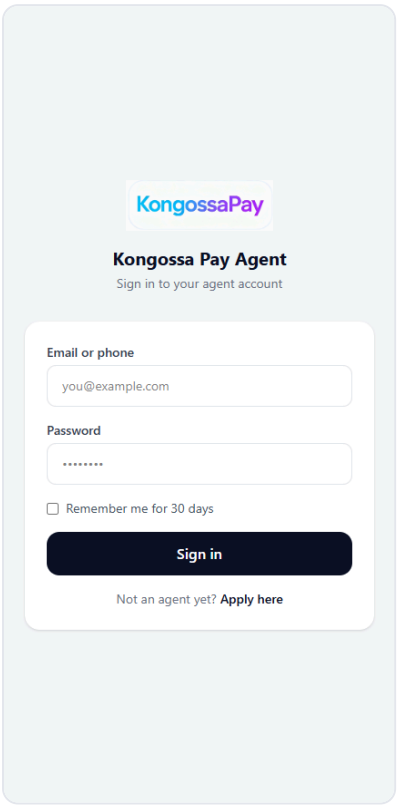

- **An agent can never take money from a customer's wallet.** Money leaves a customer's wallet only after the customer approves it in their own app.
- **Every cash-out and every transfer needs the customer's code.** The code is emailed to the customer together with the amount, the agent's name and a reference. There is no amount below which the code is skipped.
- **The customer types the code only in their own app.** The agent never sees it and must never ask for it.
- **Codes are valid for 10 minutes.** An approved cash-out waits 15 minutes for the agent to hand over the cash; after that it expires and nothing moves.
- **Receipts.** After every cash-in, cash-out and transfer, every party (customer, recipient, agent) receives a receipt by email.
- **Commission.** The agent earns commission on cash-in and cash-out, at the rate set by Kongossa Pay. Transfers earn no commission and do not change the agent's cash.
- **Cash on hand.** The app keeps the agent's physical cash balance: it starts at the opening cash, goes up with every cash-in and down with every cash-out.

> Every balance change is written to the transaction ledger in one database transaction, so a customer's history, the agent's cash on hand and the agent's commission always agree.

2. Agent app

The agent app is built for phones. Open **kongossapayagent.com** in the phone's browser. The menu at the bottom has four tabs: `Home`, `Transactions`, `Settlement` and `Settings`. The signed-in agent's name and email are always shown at the top right.

2.1 Sign in

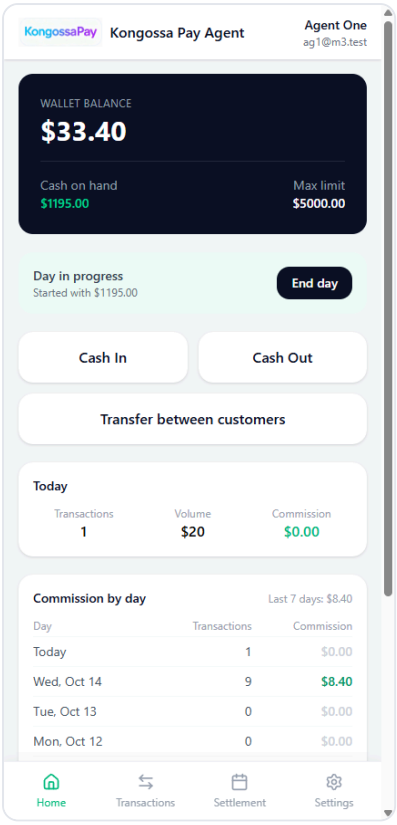

Sign in

1. Enter your **email or phone** and your **password**, then tap `Sign in`.
2. A 6-digit code is sent to your email. Enter it on the next screen and tap `Verify`.
3. Tick **Remember me for 30 days** only on your own phone.

> Only approved agents can work in the app. An agent whose application is still being reviewed sees an **Awaiting approval** screen instead of the dashboard.

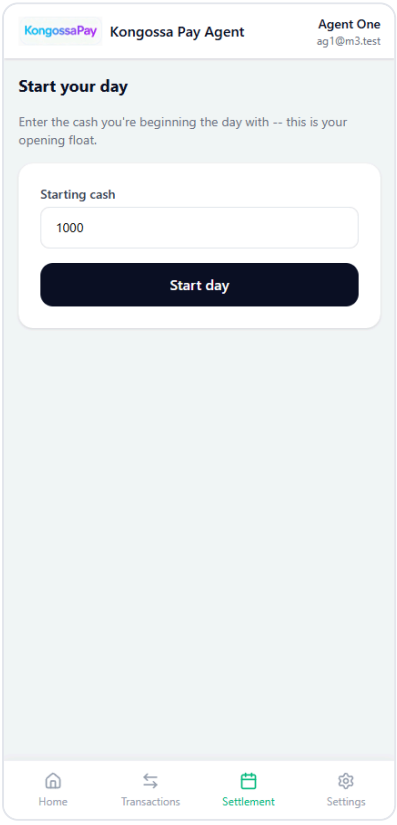

2.2 Dashboard

Home

- **Wallet balance**: the agent's own Kongossa Pay wallet, where commission is paid.
- **Cash on hand**: the physical cash the system expects you to hold. **Max limit** is the most cash you may hold.
- **Day in progress / Day not started**, with the `Start day` or `End day` button.
- `Cash In`, `Cash Out` and `Transfer between customers`. They are disabled until the day is started.
- **Today**: number of transactions, volume and commission.
- **Commission by day**: see section 2.8.

2.3 Start your day

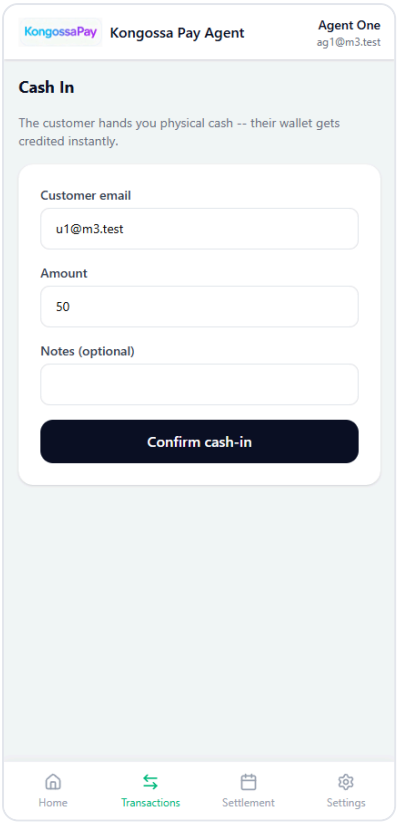

Start your day

1. Count the cash you start with.
2. Tap `Start day` on Home (or `Settlement` → `Start day`).
3. Enter the amount in **Starting cash** and tap `Start day`.

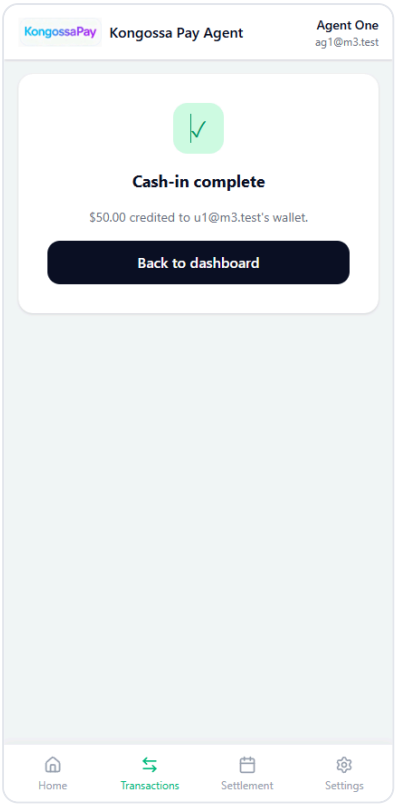

Your cash on hand is set to this amount. No cash-in, cash-out or transfer is possible before the day is started, and only one day can be open at a time.

> The starting cash cannot be higher than your maximum cash on hand. If you need a higher limit, contact Kongossa Pay.

2.4 Cash In (the customer gives you cash)

Cash In form

Completed

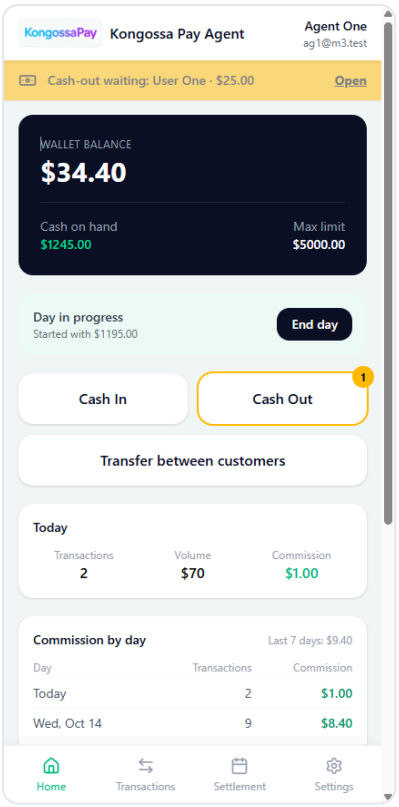

1. Take the cash from the customer and count it.
2. Tap **Cash In**.
3. Enter the customer's **email**, the **amount** and, if you like, a note.
4. Tap **Confirm cash-in**.

The customer's wallet is credited at once, your cash on hand goes up by the amount, and your commission is added to your wallet. The customer and you each receive a receipt by email.

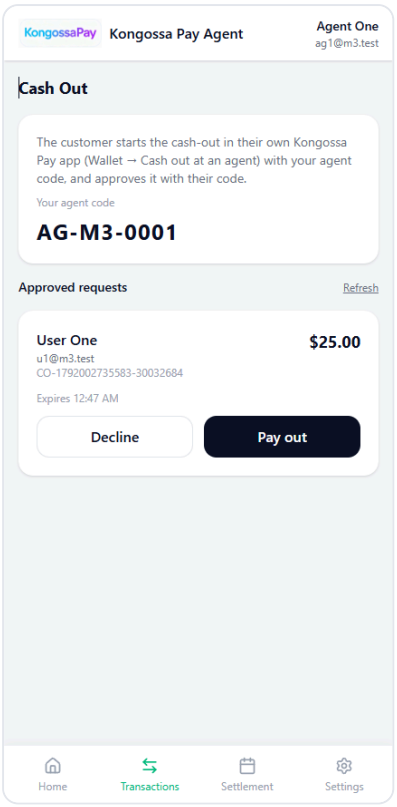

> A cash-in is refused if the customer's account is not active, if it would take your cash above your maximum, or if it is above your per-transaction, daily or monthly limit.

2.5 Cash Out (the customer takes cash)

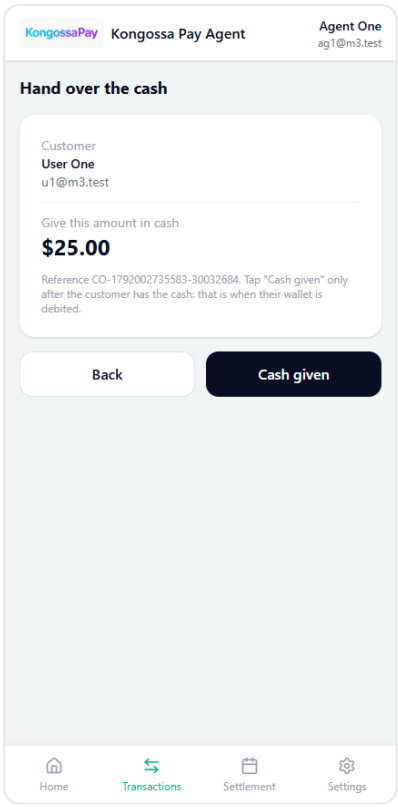

The **customer starts** the cash-out in their own app with your **agent code** and approves it with their emailed code (see section 3.1). Only then does the request reach you.

Alert on any page

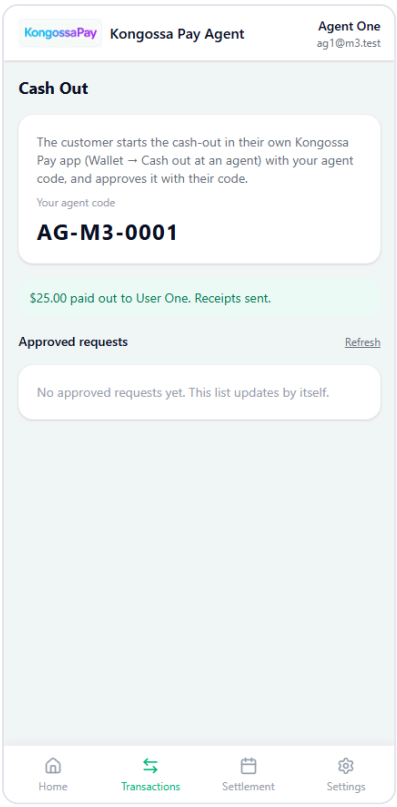

Approved requests

Hand over the cash

1. Tell the customer your agent code. It is shown on the **Cash Out** page (for example `AG-M3-0001`).
2. When the customer has approved, a **yellow alert** appears at the top of every page, for example "*Cash-out waiting: User One · $25.00*". The **Cash Out** button shows the number of waiting requests, and so does the browser tab title.
3. Tap **Open** (or **Cash Out**). Each request shows the customer's name, email, reference, amount and expiry time.
4. Tap **Pay out**, check the name and the amount, and give the customer the cash.
5. Tap **Cash given** **only after** the customer has the cash. This is the moment the customer's wallet is debited.

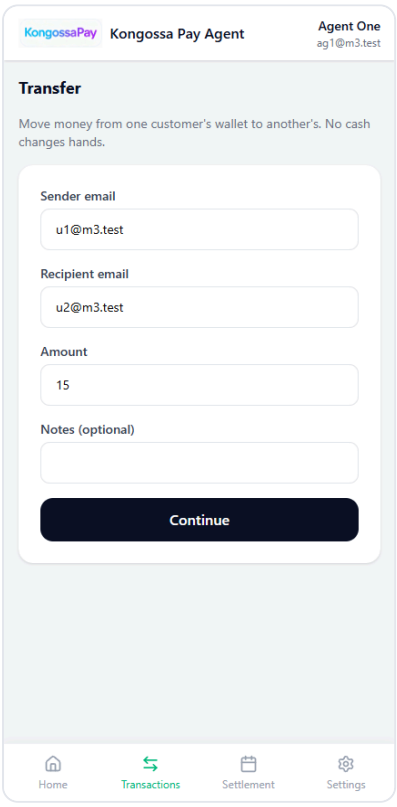

Paid out

After **Cash given**, your cash on hand goes down by the amount and your commission is added to your wallet. Receipts are emailed to the customer and to you.

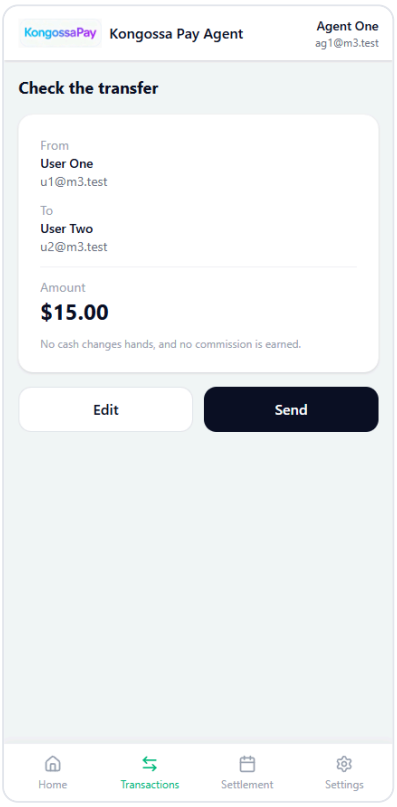

> If you cannot pay a request (for example you do not have enough cash), tap **Decline**. Nothing is taken from the customer. A request that is not paid within 15 minutes expires by itself.

2.6 Transfer between customers

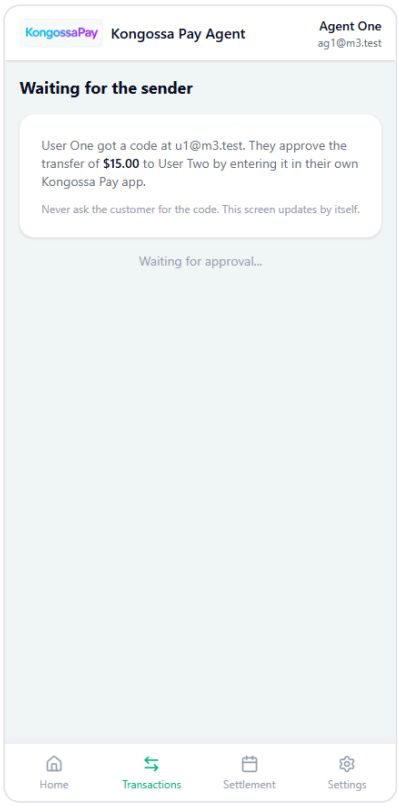

You can help a customer send money from their wallet to another customer. The **sender approves** the transfer in their own app; no cash changes hands and no commission is earned.

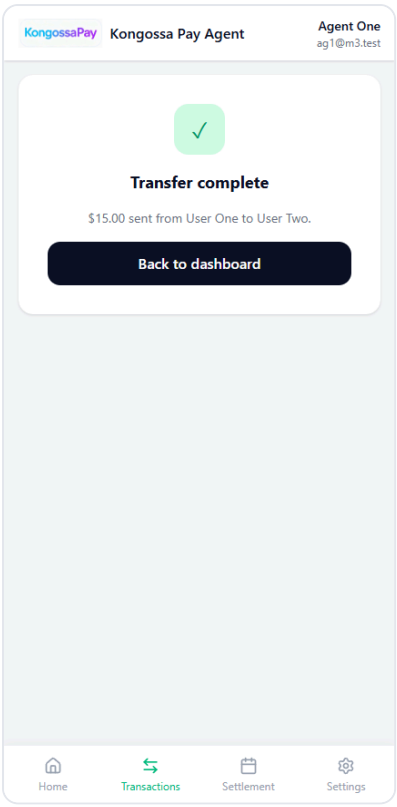

1. Enter the transfer

2. Check it

3. Wait for the sender

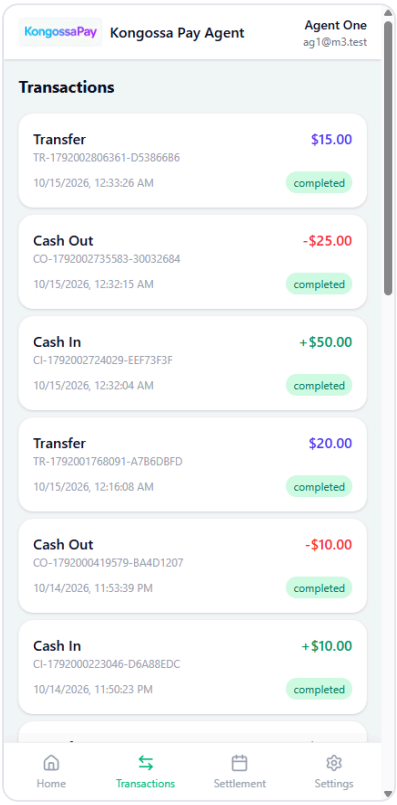

4. Transfer complete

1. Tap **Transfer between customers**.
2. Enter the **sender's email**, the **recipient's email**, the **amount** and an optional note, then tap **Continue**.
3. Check both names and the amount with the customer, then tap **Send**.
4. The sender receives a code by email and approves the transfer in their own app (section 3.2). Your screen shows **Waiting for the sender** and updates by itself.
5. When the sender approves, your screen changes to **Transfer complete**. Sender, recipient and you each receive a receipt.

> Never ask the customer for the code. If the sender rejects the transfer, or the code expires, nothing moves.

2.7 Transactions

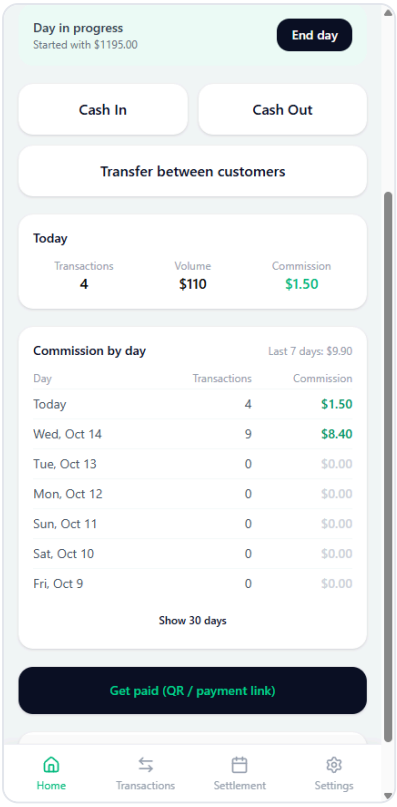

Transactions

The **Transactions** tab lists your cash-ins (green, +), cash-outs (red, −) and transfers (blue), newest first, with reference, amount, date, time and status.

Use the reference when you talk to a customer or to Kongossa Pay about a transaction: the same reference appears in the customer's history and on the receipts.

2.8 Commission by day

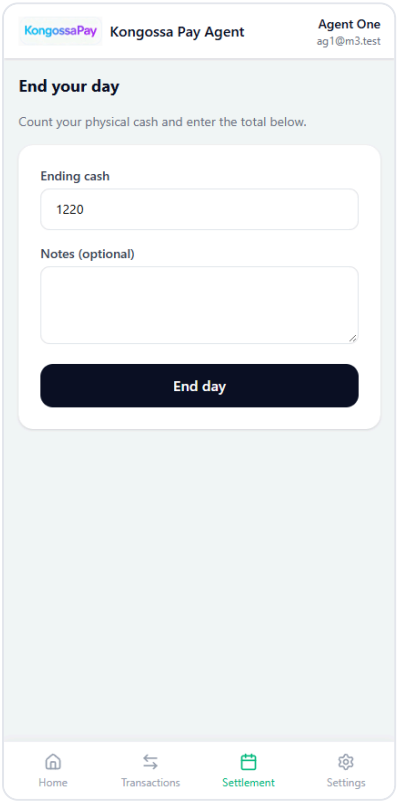

Commission by day

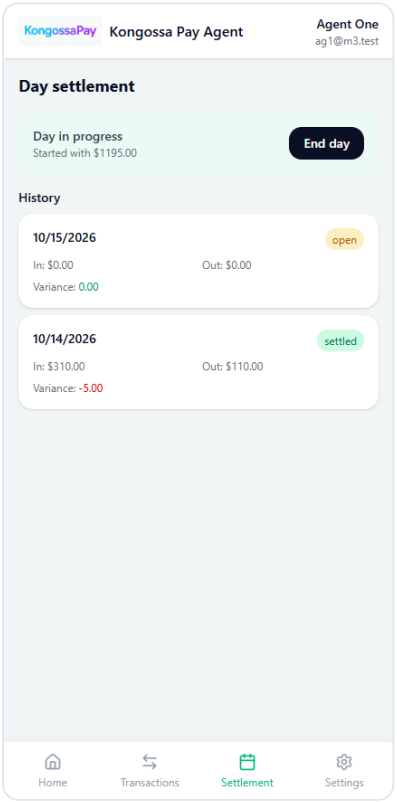

The **Commission by day** card on Home shows, for each day, the number of completed transactions and the commission earned. It shows the last 7 days; tap **Show 30 days** for a month. Days without transactions show 0.

Only completed transactions count. A cash-out that is still waiting for you is counted once you tap **Cash given**.

2.9 End your day and settlement

End your day

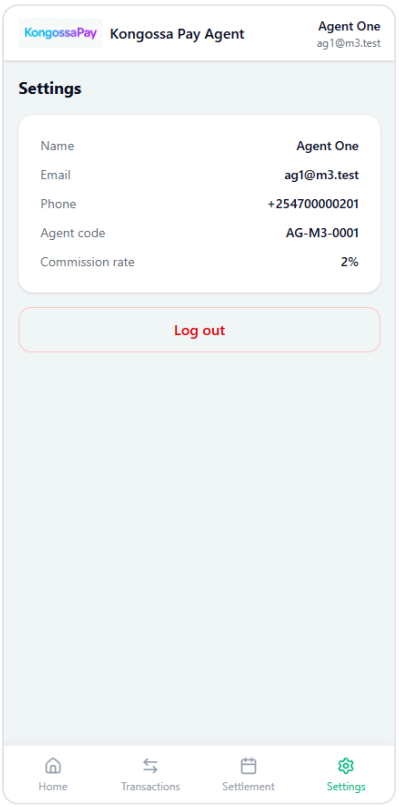

Settlement history

1. At closing time, count all the cash you hold.
2. Tap **End day** (on Home or Settlement).
3. Enter the counted amount in **Ending cash**, add a note if needed, and tap **End day**.

The system works out the **expected cash** = opening cash + cash-ins − cash-outs (transfers do not count) and the **variance** = counted − expected. A negative variance means cash is missing. The day becomes **settled** and your cash on hand is set to the counted amount.

The **Settlement** tab lists every day with its cash in, cash out and variance. The figures of the day in progress are filled in when the day is ended; Kongossa Pay staff see the live figures in the admin Inventory tab (section 4.4).

2.10 Settings and log out

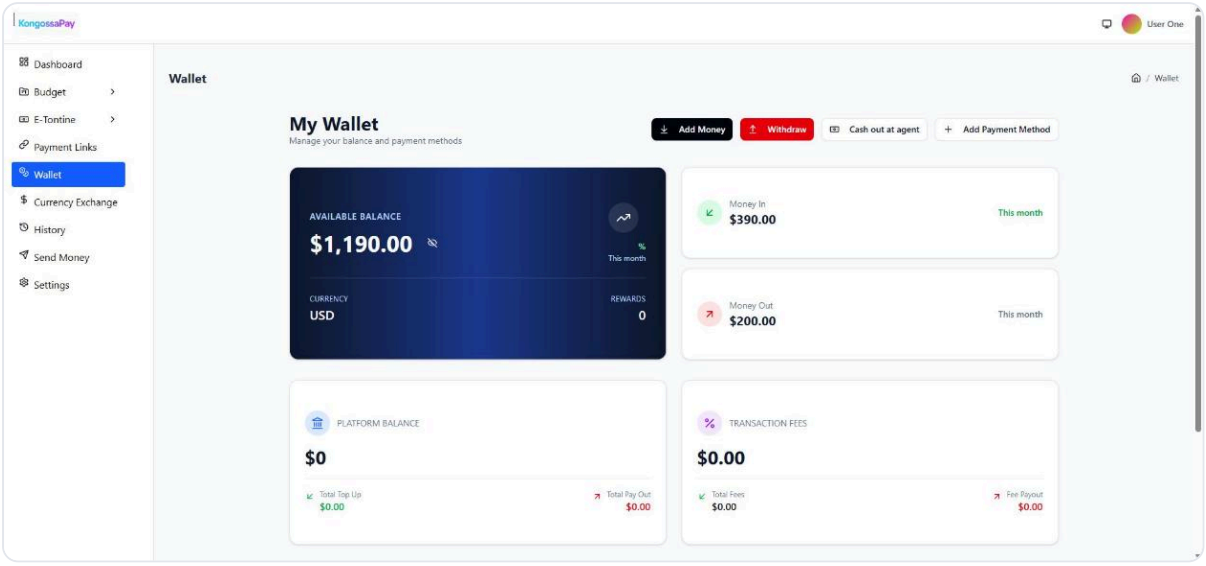

Settings

Settings shows your name, email, phone, agent code and commission rate. Limits and commission are set by Kongossa Pay and cannot be changed from the agent app.

Tap **Log out** when you leave a shared phone.

3. Customer app

3.1 Cash out at an agent

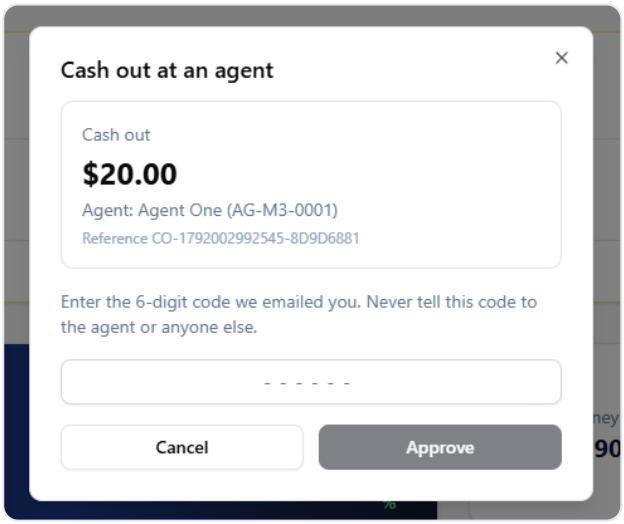

Wallet page with the "Cash out at agent" button

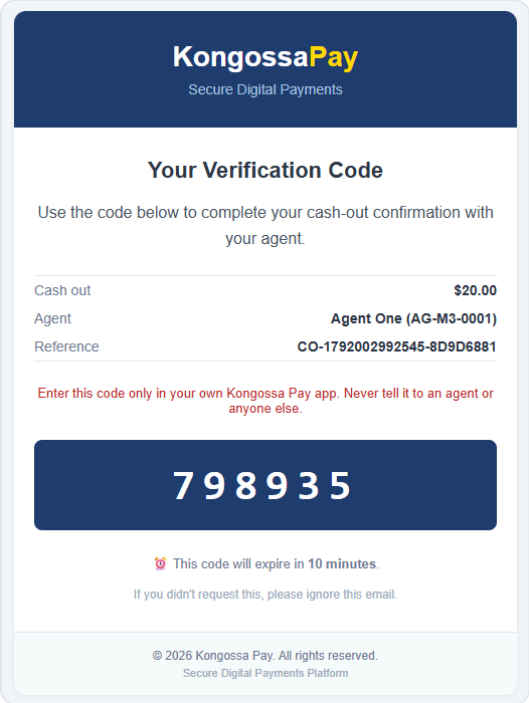

1. At the agent's counter, open **Wallet** in the Kongossa Pay app and tap **Cash out at agent**.
2. Ask the agent for their **agent code**. Enter it and the **amount**, then tap **Continue**. You cannot cash out more than your available balance.

Agent code and amount

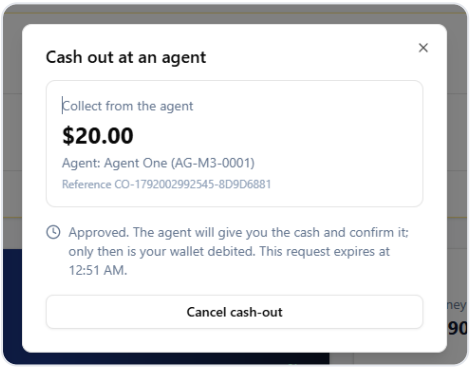

Enter the emailed code

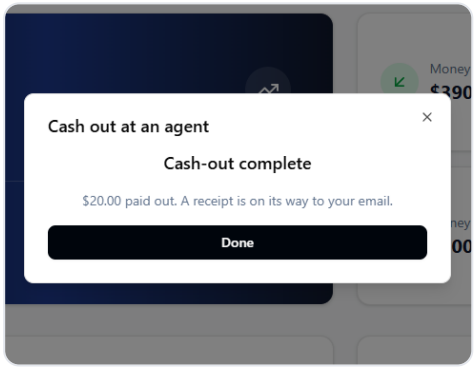

The code email

3. You receive an email with the amount, the agent's name and code, a reference and a **6-digit code**. Check that the amount and the agent are right.
4. Type the code in the app and tap `Approve`. **Never tell the code to the agent or anyone else.**
5. The app shows **Collect from the agent**. Nothing has left your wallet yet.
6. The agent gives you the cash and taps **Cash given**. Your wallet is debited at that moment, the app shows **Cash-out complete**, and a receipt arrives by email.

> Changed your mind? Tap `Cancel` (or `Cancel cash-out`) at any time before the agent taps Cash given. Nothing is taken from your wallet. A wrong code can be retried; after 5 wrong codes the request is cancelled and you start a new one.

Approved, waiting for the cash

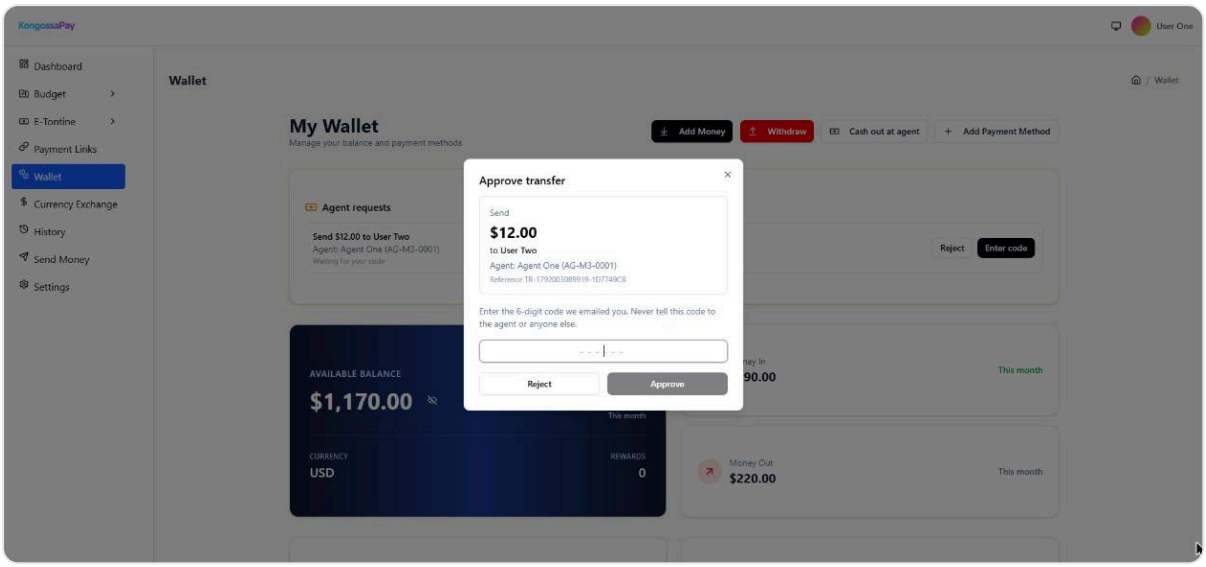

Cash-out complete

Receipt email

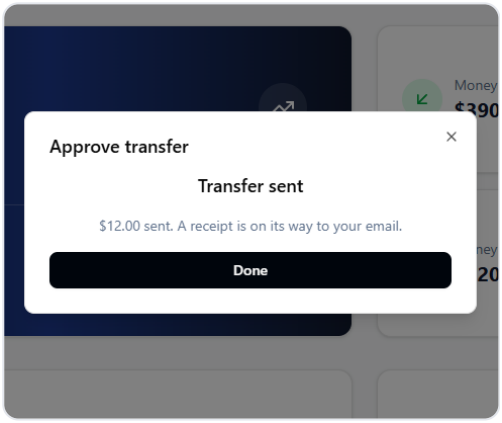

3.2 Approve or reject a transfer prepared by an agent

When an agent prepares a transfer from your wallet, you receive a code by email and the request appears in your app. Money moves only if you approve it.

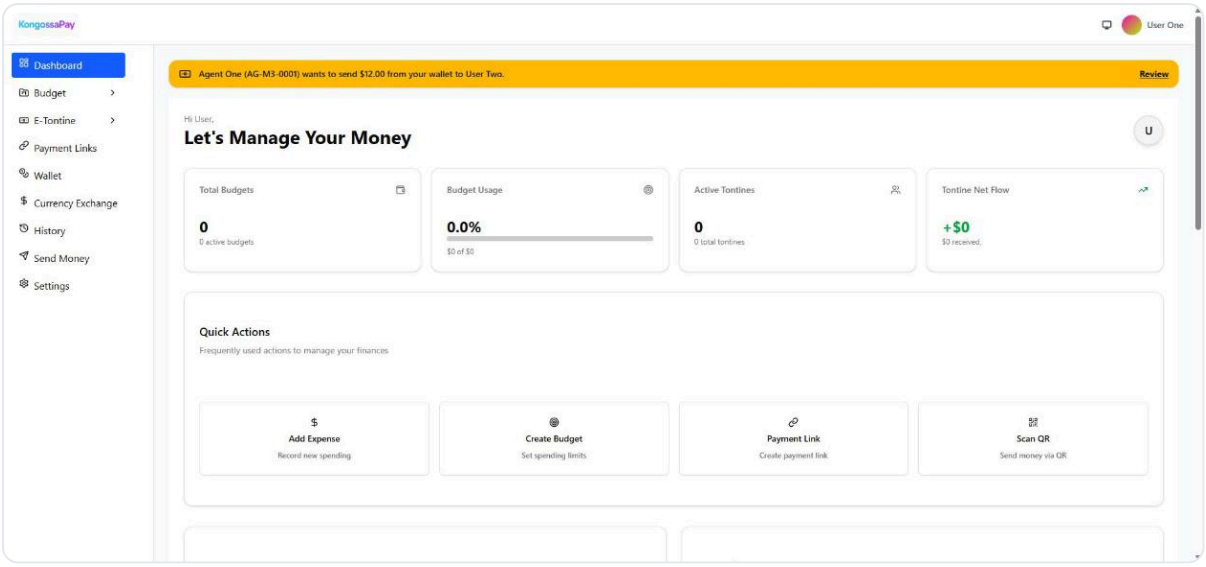

Wallet → Agent requests → Enter code

1. Open the request: tap the yellow alert (section 3.3), or open **Wallet** and tap **Enter code** in the **Agent requests** card.
2. Check the amount, the recipient and the agent.
3. Type the emailed code and tap **Approve**. The money is sent at once and a receipt is emailed.
4. If you did not ask for this transfer, tap **Reject**. Nothing moves.

Transfer sent

3.3 Request alerts on every page

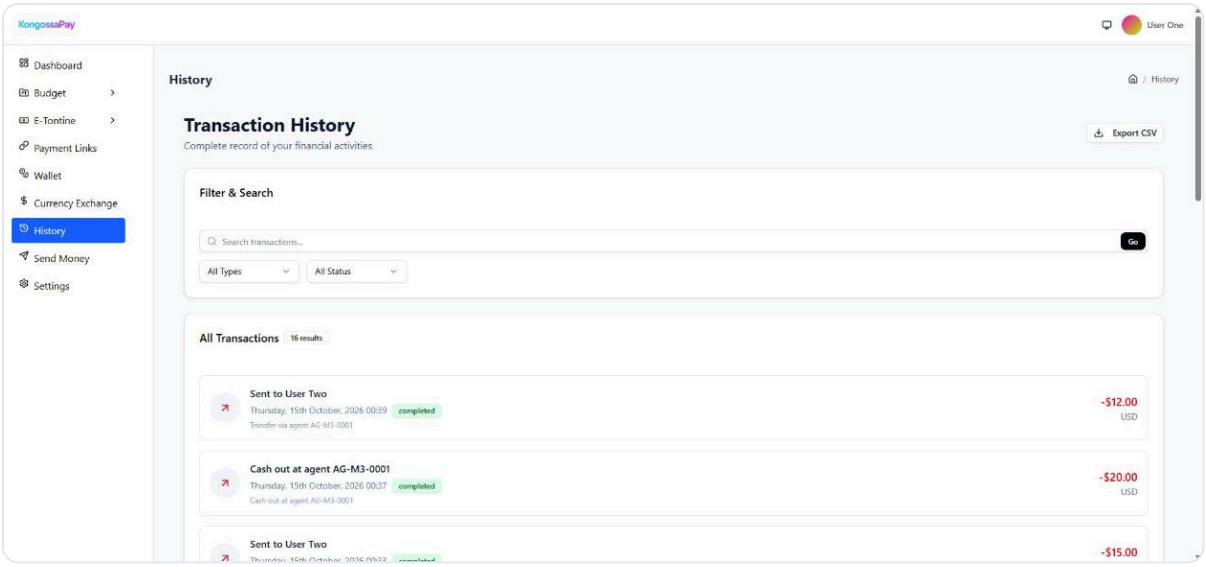

A waiting request shown on the Dashboard

Whenever a request is waiting for you, a **yellow alert** appears at the top of every page of the app, and the browser tab title shows the number of requests:

- "*Agent One wants to send $12.00 from your wallet to User Two.*" → **Review**
- "*Your $10.00 cash-out at Agent One is waiting for your code.*" → **Enter code**
- "*Collect $10.00 in cash from Agent One.*" → **View**

Tapping the alert opens the request on the Wallet page. Your wallet balance updates by itself when a request is completed, declined or cancelled.

3.4 History and receipts

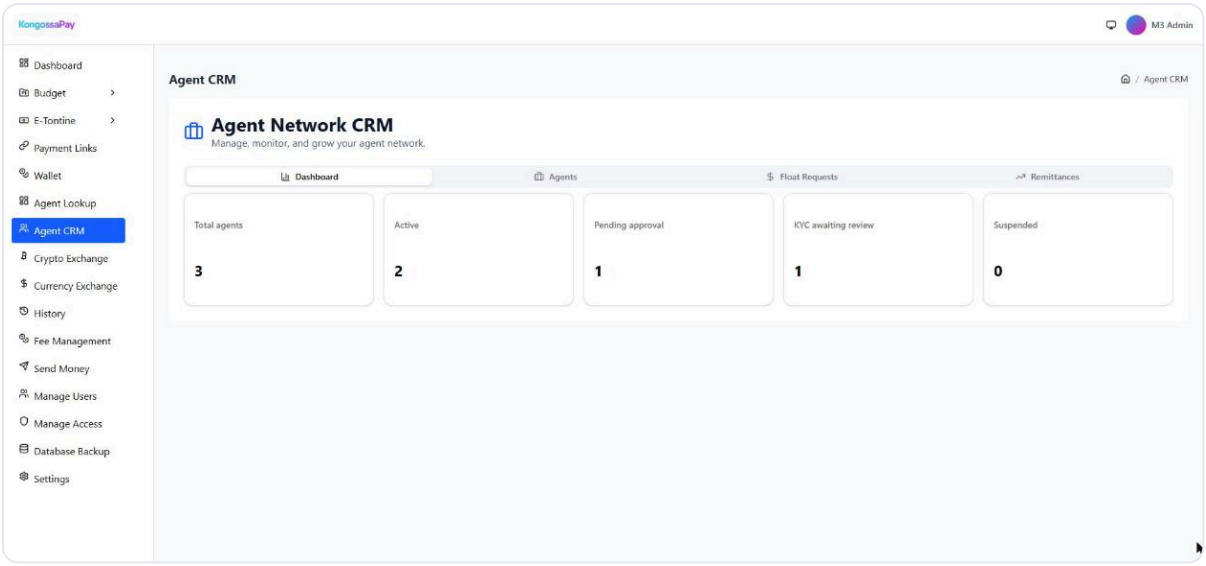

History

History lists every agent transaction (*Cash in at agent*, *Cash out at agent*, *Sent to …*, *Received from …*) with the agent code, the date and the amount. Each one has the same reference as the receipt email and the agent's record.

4. Admin panel: Agent CRM

Sign in to kongossapay.com with a staff account and open **Agent CRM** in the left menu.

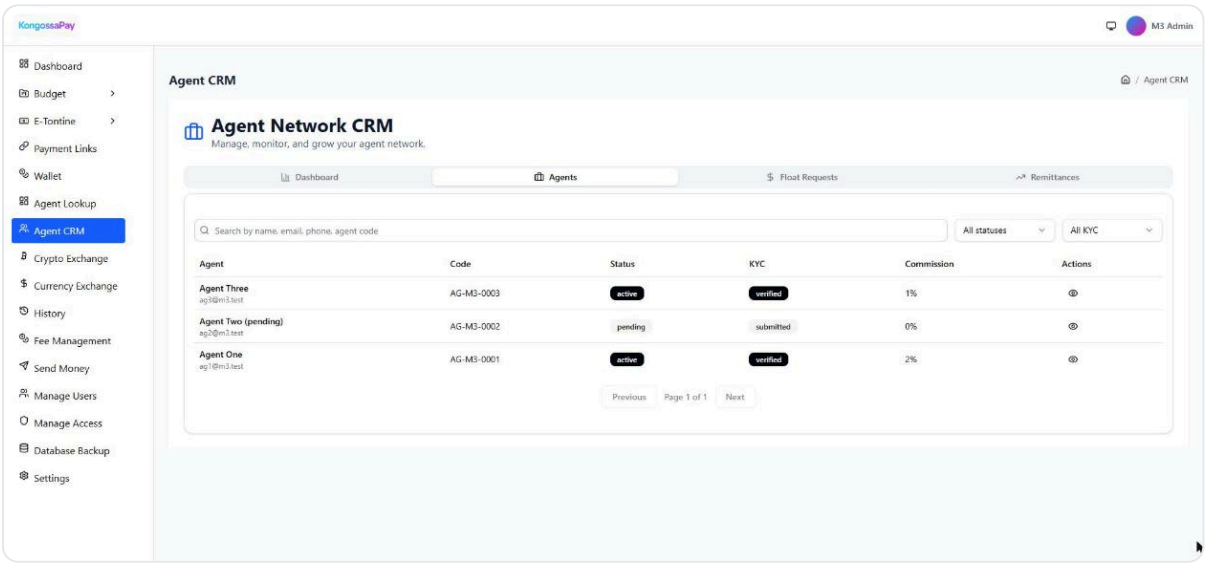

4.1 Dashboard

Agent CRM → Dashboard

Totals of the agent network: total agents, active, pending approval, KYC awaiting review and suspended.

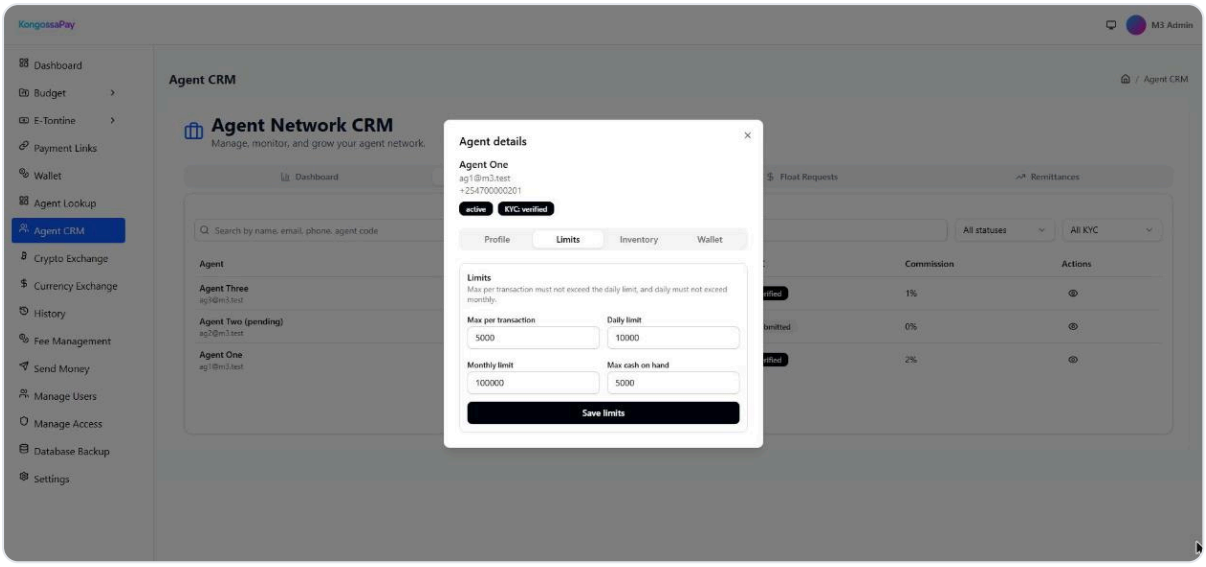

4.2 Agents

Agent CRM → Agents

Search by name, email, phone or agent code, and filter by status or KYC. The eye icon at the end of a row opens the agent's details, with four tabs: **Profile**, **Limits**, **Inventory** and **Wallet**.

4.3 Limits

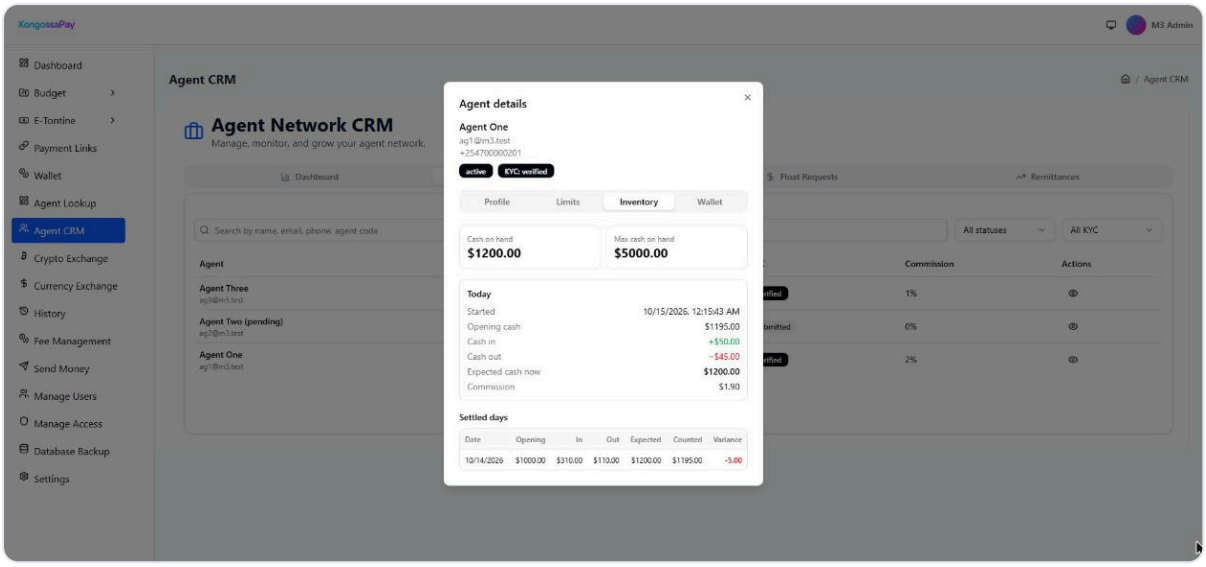

Agent details → Limits

- **Max per transaction**: the largest single cash-in, cash-out or transfer.
- **Daily limit** and **Monthly limit**: the total of the agent's transactions per day and per month. Requests waiting for approval count until they end.
- **Max cash on hand**: the most physical cash the agent may hold; a cash-in that would go above it is refused.

Change a value and tap `Save limits`. The rule **max per transaction ≤ daily ≤ monthly** is checked, and a wrong combination is refused with a clear message. If you set the maximum cash below what the agent holds now, the save works and you are warned: the agent can still give cash out but cannot take more in. New limits apply from the next transaction.

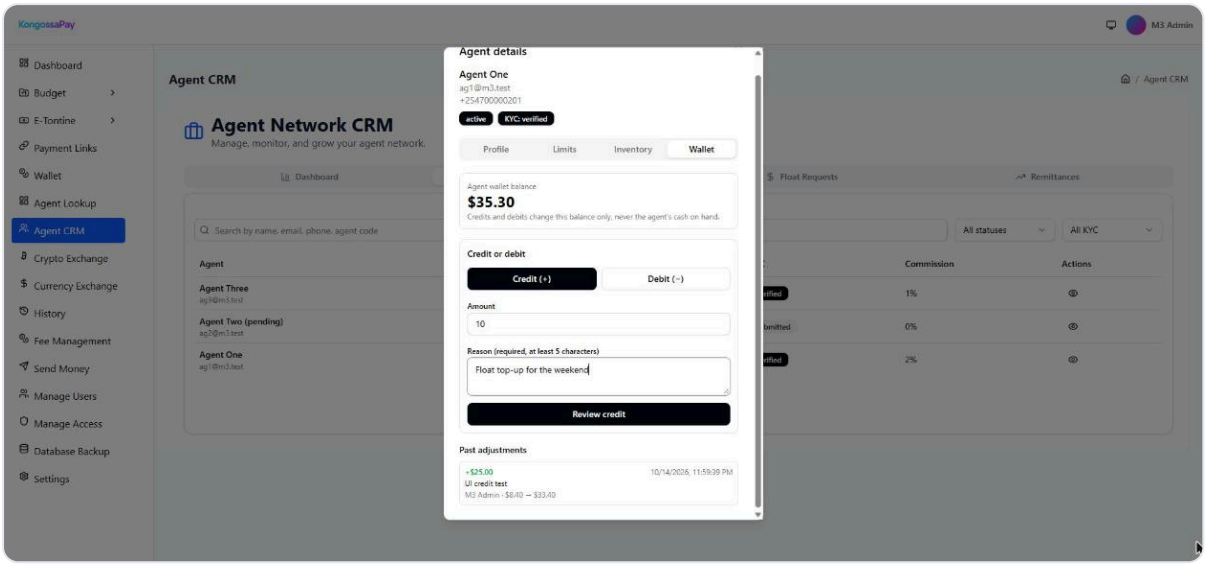

4.4 Inventory

Agent details → Inventory

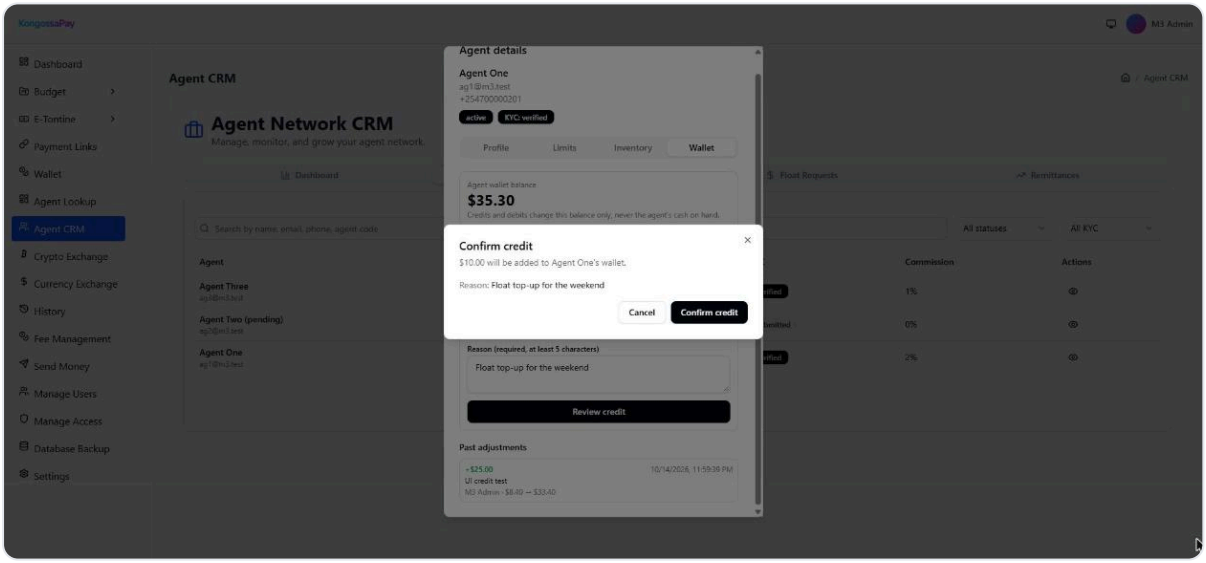

The agent's cash on hand and maximum; the day in progress (start time, opening cash, cash in, cash out, expected cash now and commission); and every settled day with opening, in, out, expected, counted and variance. Variances other than zero are shown in colour.

4.5 Wallet credit and debit

Agent details → Wallet

1. Choose **Credit (+)** or **Debit (−)**.
2. Enter the **amount** and a **reason** (required, at least 5 characters).
3. Tap **Review credit** / **Review debit**, read the confirmation and tap **Confirm**. **Cancel** changes nothing.

Confirmation step

This changes the agent's **wallet** only, never their cash on hand. A debit cannot take the wallet below zero. Every adjustment is listed under **Past adjustments** with the amount, reason, staff member, balance before and after, and date, and is written to the ledger.

4.6 Permissions

Staff with read-only access to the Agent CRM can see every tab but cannot save limits or make adjustments. Agents cannot change their own limits or commission.

5. Messages you may see

Message	Where	What it means / what to do
Start your day before processing transactions	Agent	Start the day first (section 2.3).
A day is already open -- end it before starting a new one	Agent	End the current day before starting another.
Opening cash exceeds your maximum cash on hand. Contact an administrator to raise the limit.	Agent	Start with less cash, or ask Kongossa Pay to raise the limit.
No user found with that email	Agent	Check the customer's email.
This user account is not active	Agent	The customer's account is suspended; no transaction is possible.
This would exceed your maximum cash on hand	Agent	The cash-in would take your cash above your maximum.
This amount exceeds the maximum amount per transaction (...)	Agent, Customer	Use a smaller amount, or ask Kongossa Pay to change the limit.
This transaction would exceed your daily (monthly) transaction limit	Agent	The agent's limit for today (this month) is reached.
The sender's wallet balance is insufficient for this transfer	Agent	The sender does not have enough money.
Sender and recipient must be different users	Agent	Use two different customers.
No recipient found with that email / The recipient account is not active	Agent	Check the recipient.
This cash-out request has expired. Ask the customer to start a new one.	Agent	More than 15 minutes passed; the customer starts again.
This cash-out request is no longer open	Agent	The customer cancelled it, or it was already paid or declined.
This agent does not have enough cash for this amount	Customer	Ask for a smaller amount or go to another agent.
Your wallet balance is insufficient for this cash-out / You can cash out at most $...	Customer	The amount is above your balance.
No active agent found with that code / This agent is not open for cash-out right now	Customer	Check the agent code; the agent must have started their day.
Invalid OTP. N attempts left.	Customer	The code is wrong; check the latest email.
Too many incorrect codes. This cash-out has been cancelled.	Customer	Start a new request.
This cash-out has expired. Start a new one.	Customer	The code is older than 10 minutes.

6. Security rules at a glance

For agents	For customers	For Kongossa Pay staff
• Never ask a customer for their code. • Tap **Cash given** only after the customer holds the cash. • Decline requests you cannot pay. • Count your cash at the start and end of every day. • Log out on shared phones.	• Type your code only in your own Kongossa Pay app. • Check the amount and the agent in the email before approving. • Reject any transfer you did not ask for. • Keep your receipts; each has a reference.	• Give every wallet adjustment a clear reason. • Review negative variances in the Inventory tab. • Keep each agent's limits in line with their cash and risk. • Give read-only access to staff who only need to look.

> Questions about a transaction: quote its **reference** (CI-..., CO-... or TR-...). It appears in the apps, in the agent's records and on every receipt.
