USER GUIDE · AGENTS APP CORE

Running the Agent Network, Step by Step

A walk-through of everything an agent and an admin can do with the new Agents App — registration, cash operations, day settlement, float requests, getting paid, and managing it all from the admin panel.

Prepared	Covers	Audience
September 1, 2026	Milestone 1 — Agents App Core	Agents & Admin staff

What's inside

This guide mirrors the two apps end to end: the agent's own app, and the admin panel used to manage the agent network. Every step shown here was captured directly from a working build.

PART 1 — THE AGENT APP

1. Applying to become an agent p.4
2. Uploading your ID (KYC) p.5
3. Signing in p.6
4. The one-time code p.7
5. Waiting for approval p.8
6. Your dashboard p.9
7. Starting your day p.10
8. Cash In p.11
9. Cash Out p.12
10. Ending your day p.13
11. Requesting more float p.14
12. Getting paid (QR) p.15
13. Your settings p.16

PART 2 — THE ADMIN PANEL

14. Agent CRM overview p.18
15. Viewing & searching agents p.19
16. Reviewing a new application p.20
17. Managing an active agent p.21
18. Reviewing float requests p.22
19. Looking up one agent p.23

PART 1 OF 2

The Agent App

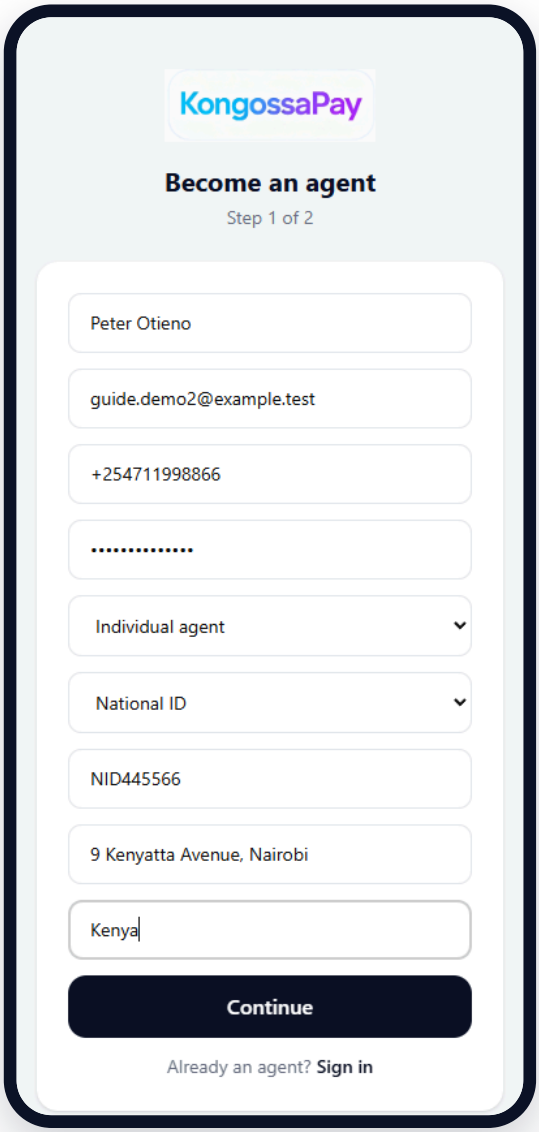

Everything an agent does day to day — from applying, through cash operations, to getting paid themselves — lives in this one app on their own phone.

01 Applying to become an agent

Anyone can apply — no invitation needed. The form asks for the basics: who they are, how to reach them, and proof of identity.

1. Open the agent app and tap **Apply here** from the sign-in screen.
2. Fill in full name, email, phone number, and a password.
3. Choose **Individual** or **Business** agent, and the type of ID being provided.
4. Enter the ID number, home/business address, and country.
5. Tap **Continue** to move to the document upload step.

All fields are required except business details — those only apply to business agents.

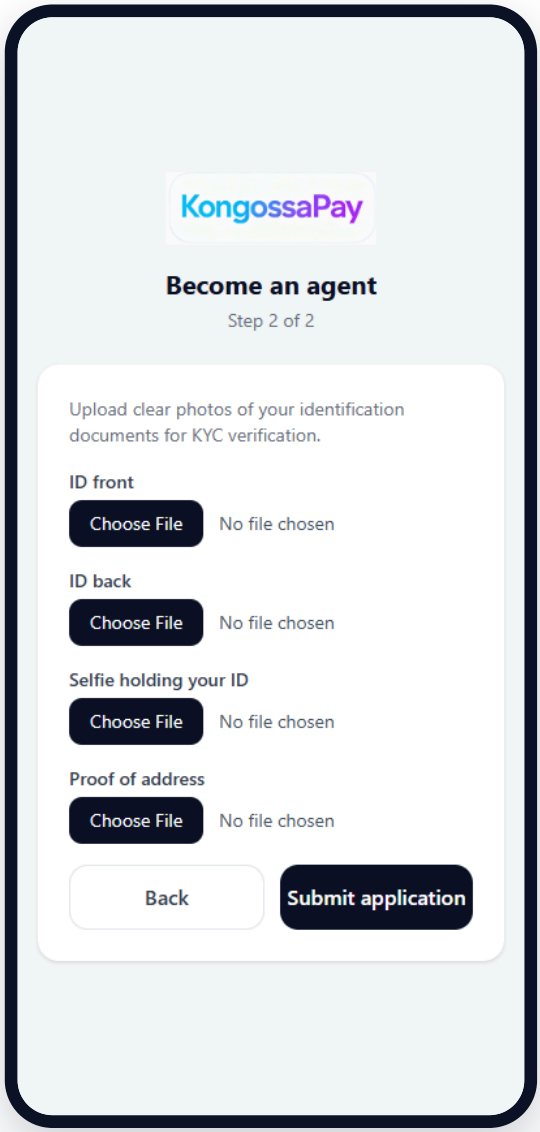

02 Uploading your ID (KYC)

The second half of the application: clear photos so the admin team can verify who they're approving.

1. Upload a photo of the **front** of the ID.
2. Upload a photo of the **back** of the ID.
3. Upload a **selfie holding the ID**, so the face and the document are visible together.
4. Upload one piece of **proof of address** (a utility bill or similar).
5. Tap **Submit application**. A confirmation screen — and a confirmation email — follow immediately.

The application is now sitting with the admin team. Nothing else is needed until it's reviewed.

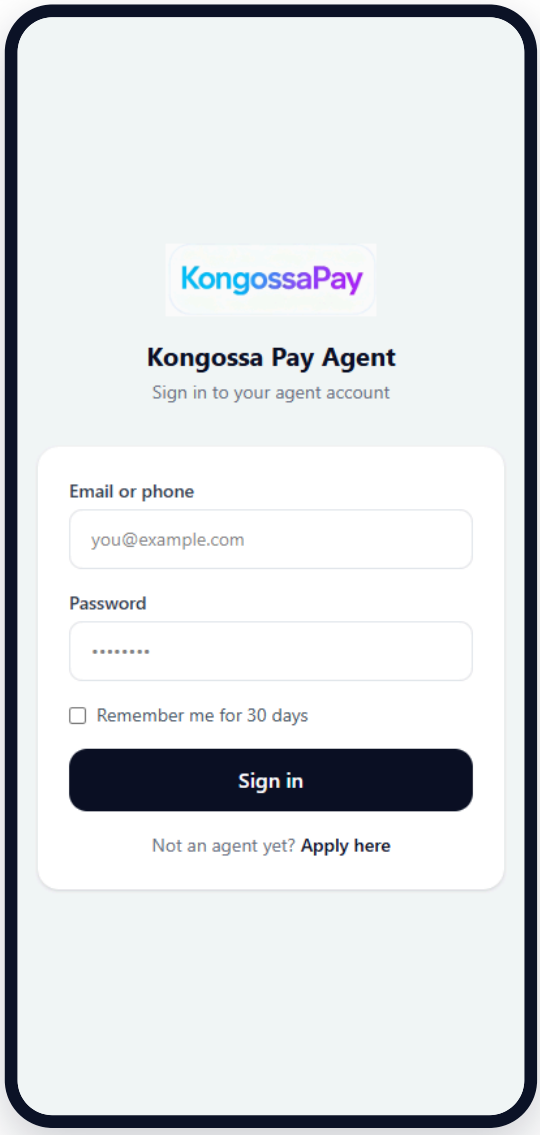

03 Signing in

The same sign-in screen serves an applicant checking their status and an approved agent starting their shift.

1. Open the agent app.
2. Enter the email (or phone) and password used at registration.
3. Tick **Remember me** to stay signed in for 30 days on this device.
4. Tap **Sign in**.

A wrong password is rejected here — nothing is emailed until the password is correct.

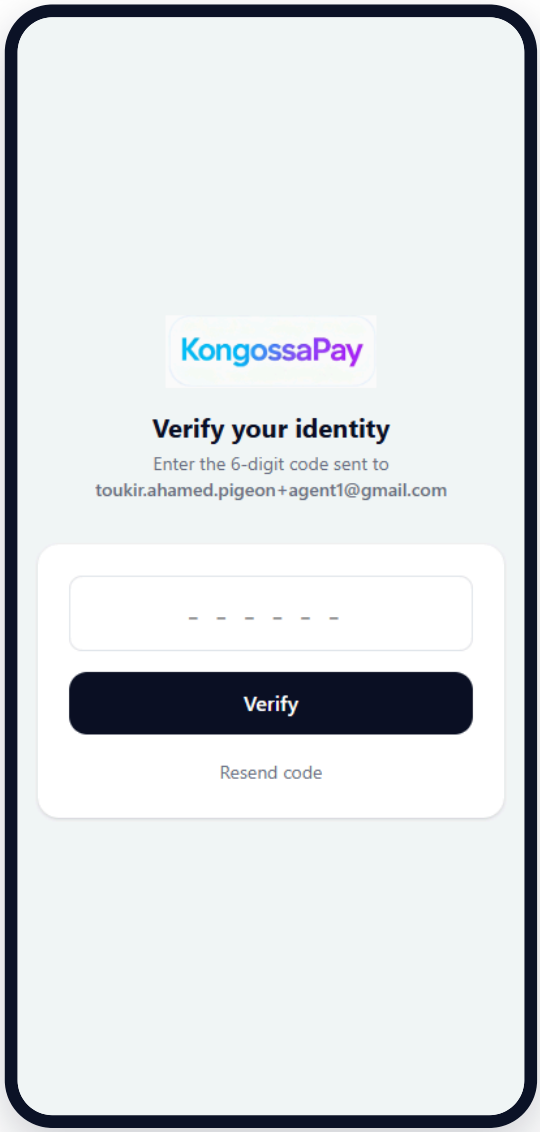

04 The one-time code

Every sign-in is confirmed with a 6-digit code emailed on the spot — a second check beyond the password alone.

1. Check the inbox for the email address just signed in with.
2. Enter the 6-digit code shown in that email.
3. Tap **Verify**.
4. Didn't get it? Tap **Resend code** — it can also land in spam.

The code expires after 10 minutes, and can only be used once.

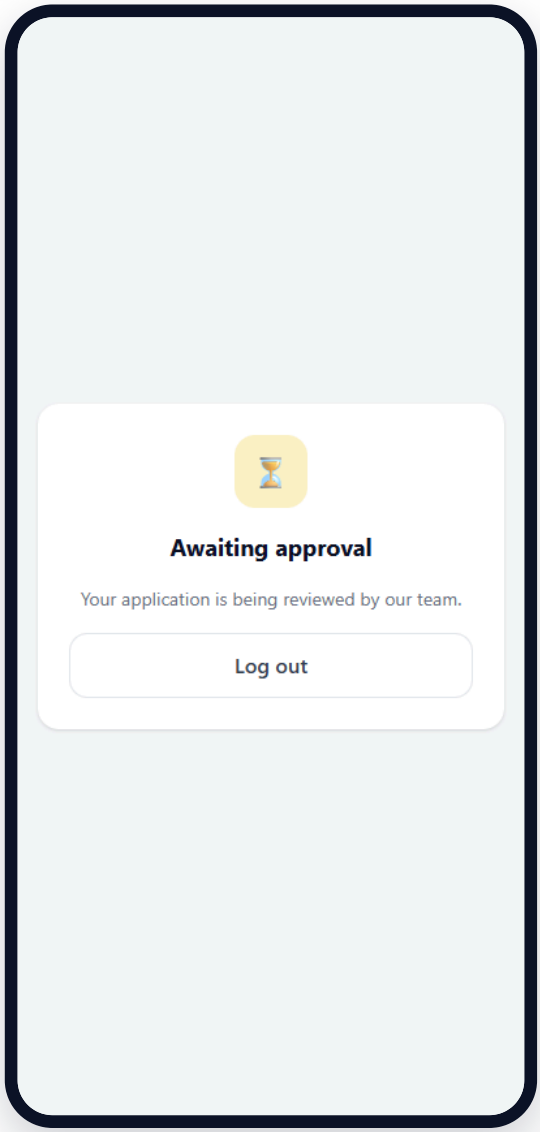

05 Waiting for approval

Between submitting an application and being approved, signing in shows this screen instead of the dashboard — nothing is broken, the account just isn't live yet.

1. Sign in as usual, any time, to check the current status.
2. If the application is rejected, the reason is shown right here.
3. An email arrives automatically the moment an admin approves the account — no need to keep checking.

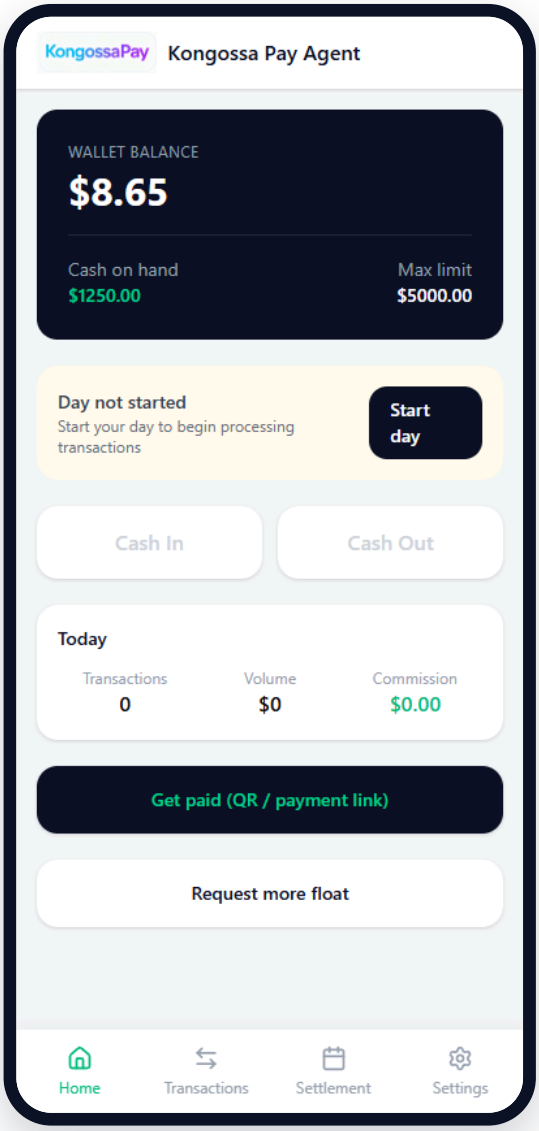

Cash operations, settlement, and every other agent feature stay locked until approval.

06 Your dashboard

The home screen once approved — a snapshot of the day plus quick access to every action.

1. **Wallet balance** — the agent's own digital wallet (commission earnings land here).
2. **Cash on hand** — the physical float currently being tracked, against the **max limit** set for this agent.
3. A banner shows whether the day is open, and a one-tap **Start day** button if not.
4. **Cash In** / **Cash Out** buttons — greyed out until the day is started.
5. Today's transaction count, volume, and commission earned so far.
6. **Get paid** and **Request more float** shortcuts at the bottom.

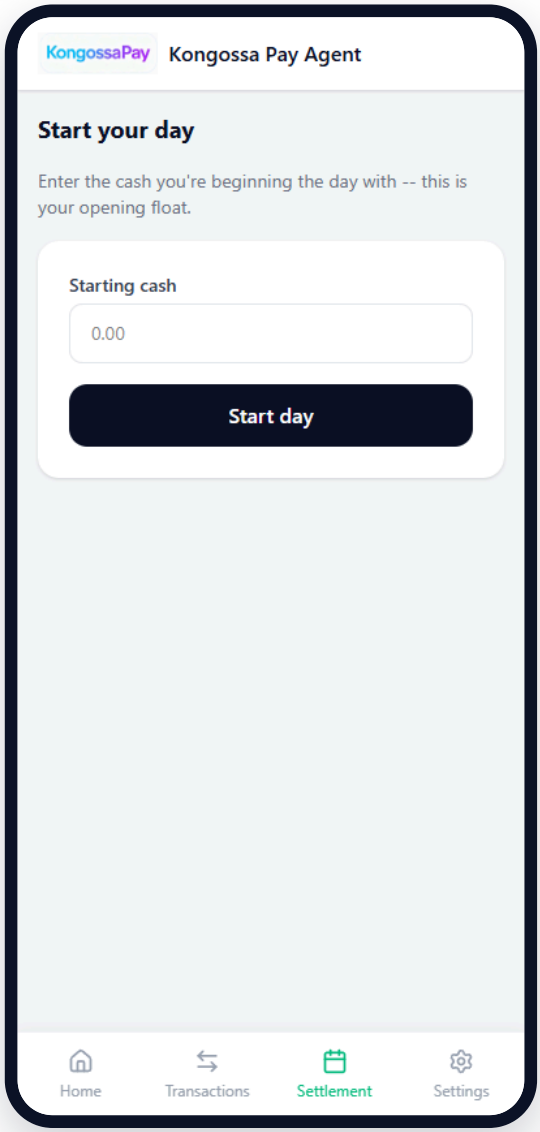

07 Starting your day

Before any cash can move through an agent's hands, the day has to be opened with an honest count of the starting float.

1. From the dashboard or Settlement tab, tap **Start day**.
2. Enter the **starting cash** — the amount physically on hand right now.
3. Tap **Start day** to confirm.

This number matters: it's the baseline the end-of-day variance is measured against.

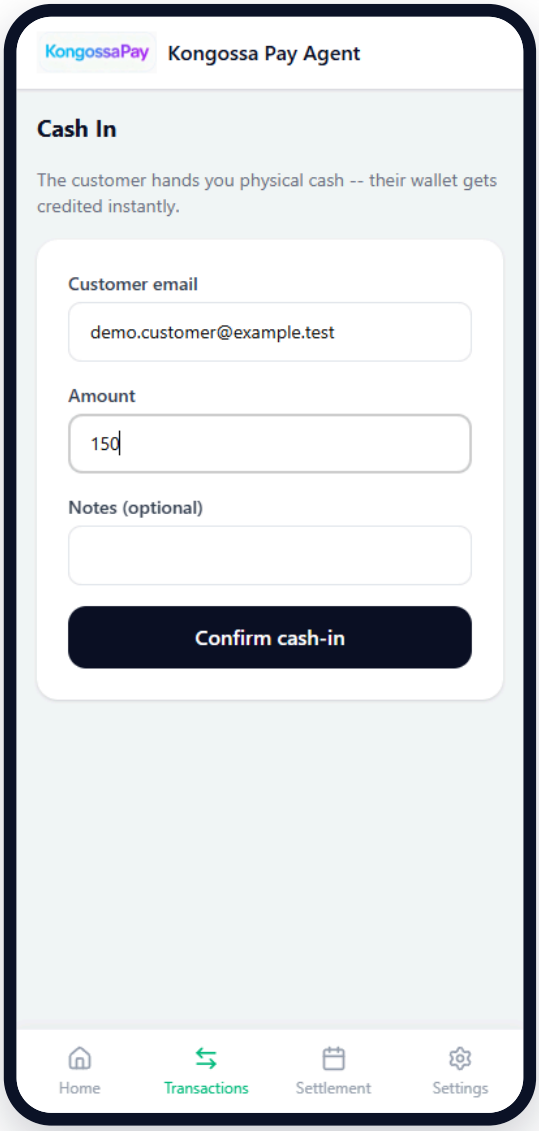

08 Cash In

A customer hands the agent physical cash; their digital wallet is credited the same instant.

1. From the dashboard, tap **Cash In**.
2. Enter the customer's email address.
3. Enter the amount received, and an optional note.
4. Tap **Confirm cash-in**.

The customer's wallet, the agent's cash-on-hand, and the agent's own commission all update immediately.

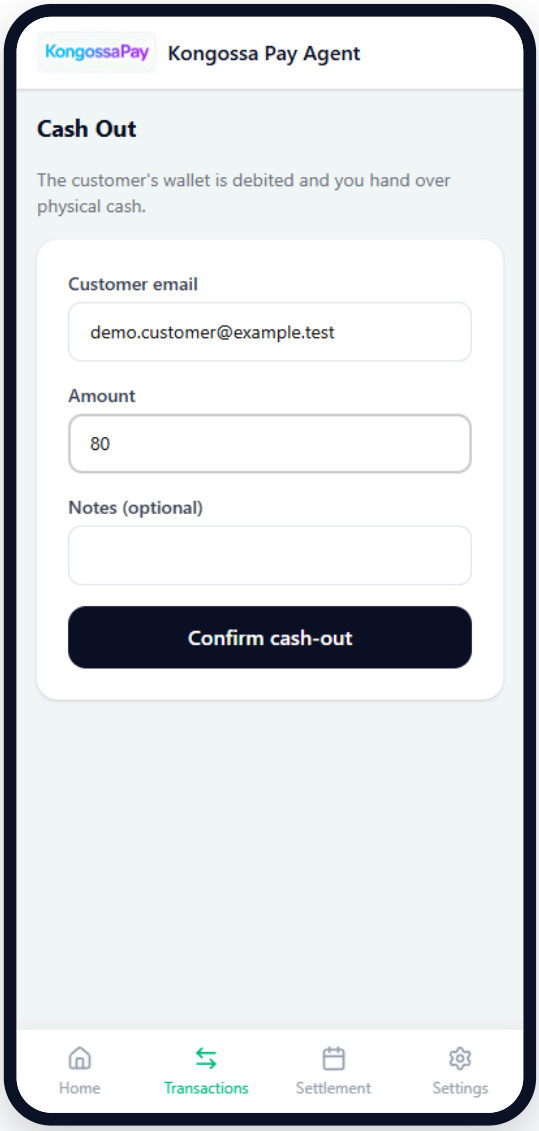

09 Cash Out

The reverse: the customer's wallet is debited and the agent hands over physical cash.

1. From the dashboard, tap **Cash Out**.
2. Enter the customer's email and the amount to hand over.
3. Tap **Confirm cash-out**.
4. Below a set amount, it completes immediately.
5. Above that amount, the customer receives a one-time code by email and must share it with the agent to confirm — a safeguard for larger withdrawals.

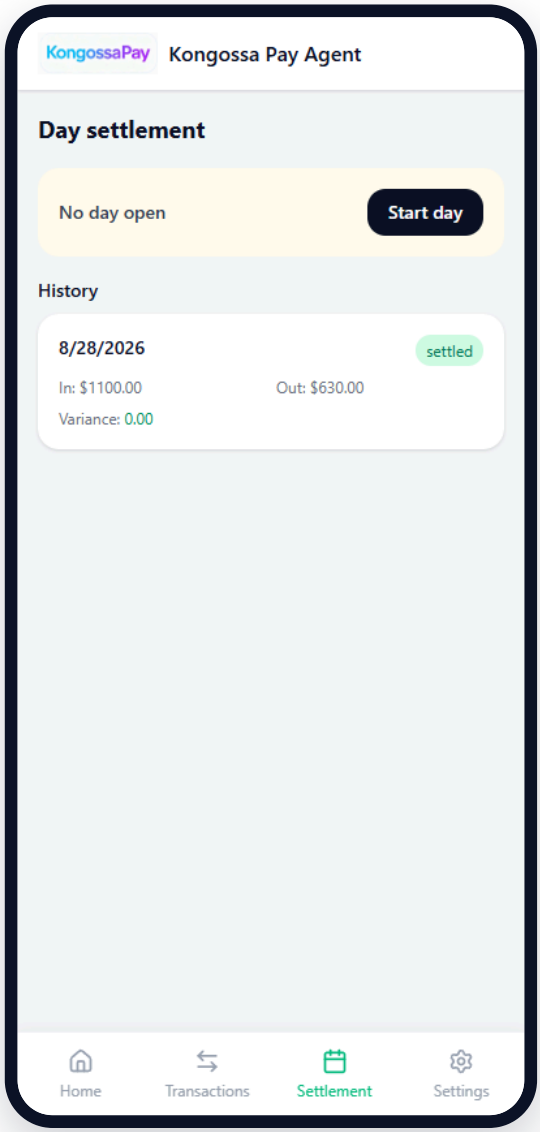

Large cash-out attempted without enough physical float on hand, or a customer whose wallet balance is too low, is rejected with a clear reason — nothing partially processes.

10 Ending your day

Closing the day reconciles what actually happened against what was expected — the same discipline a cash till drawer count would demand.

1. Open the **Settlement** tab.
2. Tap **End day** and enter the cash physically counted at close.
3. The app calculates total cash in, total cash out, commission earned, and any **variance** between expected and actual cash.
4. The day moves to **History**, and cash operations lock again until the next day is started.

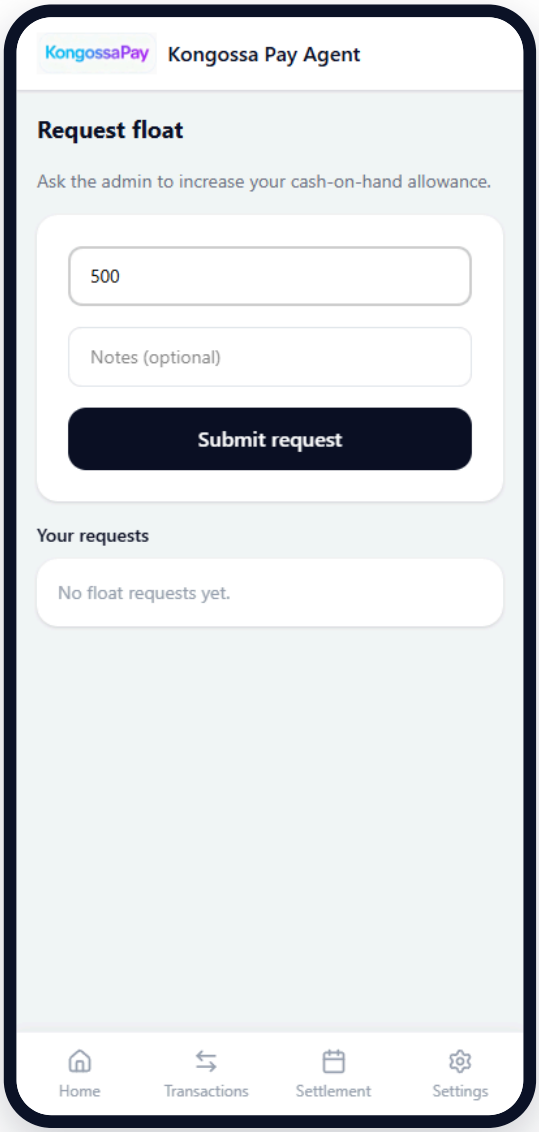

11 Requesting more float

Running low on cash to hand out? An agent can ask the company for a top-up directly from the app.

1. Open **Request more float** from the dashboard.
2. Enter the amount needed and an optional note.
3. Tap **Submit request**.
4. Past requests, and their status, are listed right below the form.

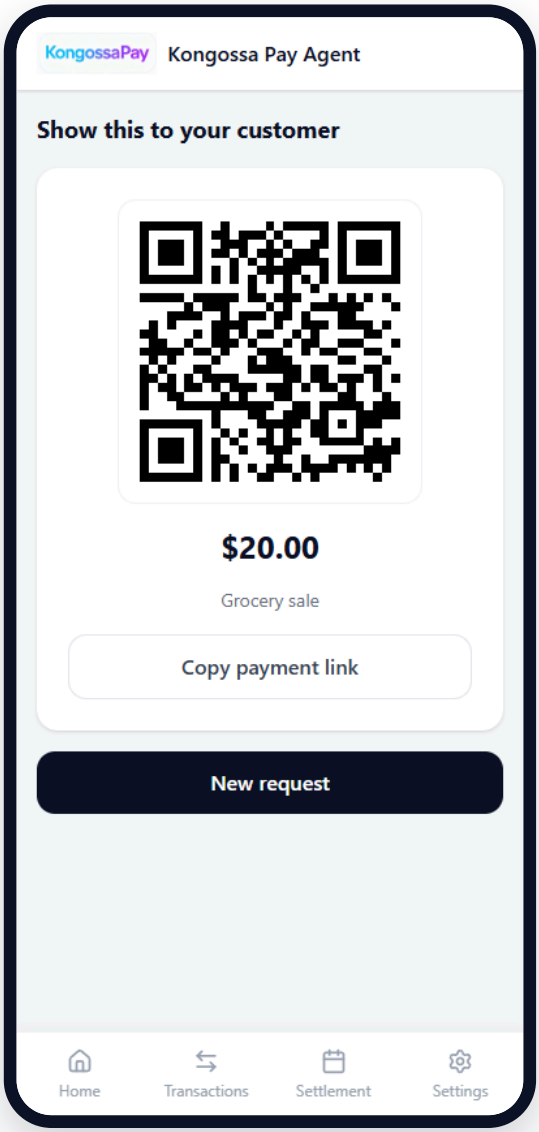

Once an admin approves it, the requested amount is added straight to cash-on-hand.

12 Getting paid (QR / payment link)

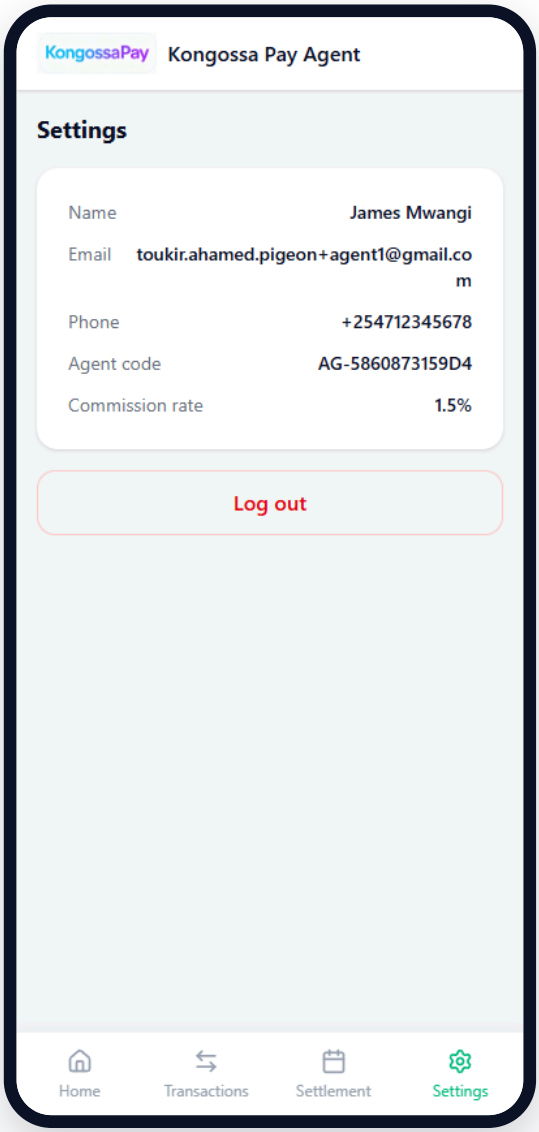

Agents aren't only a cash window — they can also take digital payment for their own sales, on the spot.

1. Open **Get paid** from the dashboard.
2. Enter an amount (or leave it blank and let the customer type their own), pick a currency, and add a description.
3. Tap **Generate QR**.
4. Show the QR code to the customer, who scans it and pays from their own phone — or share the payment link directly.

13 Your settings

A quick-reference screen for an agent's own details — name, contact info, agent code, and current commission rate.

1. Open the **Settings** tab at any time to see this information.
2. The **agent code** shown here identifies the agent internally — support may ask for it.
3. **Log out** is also here, at the bottom.

Commission rate and cash/transaction limits are set by the admin team, not editable here.

PART 2 OF 2

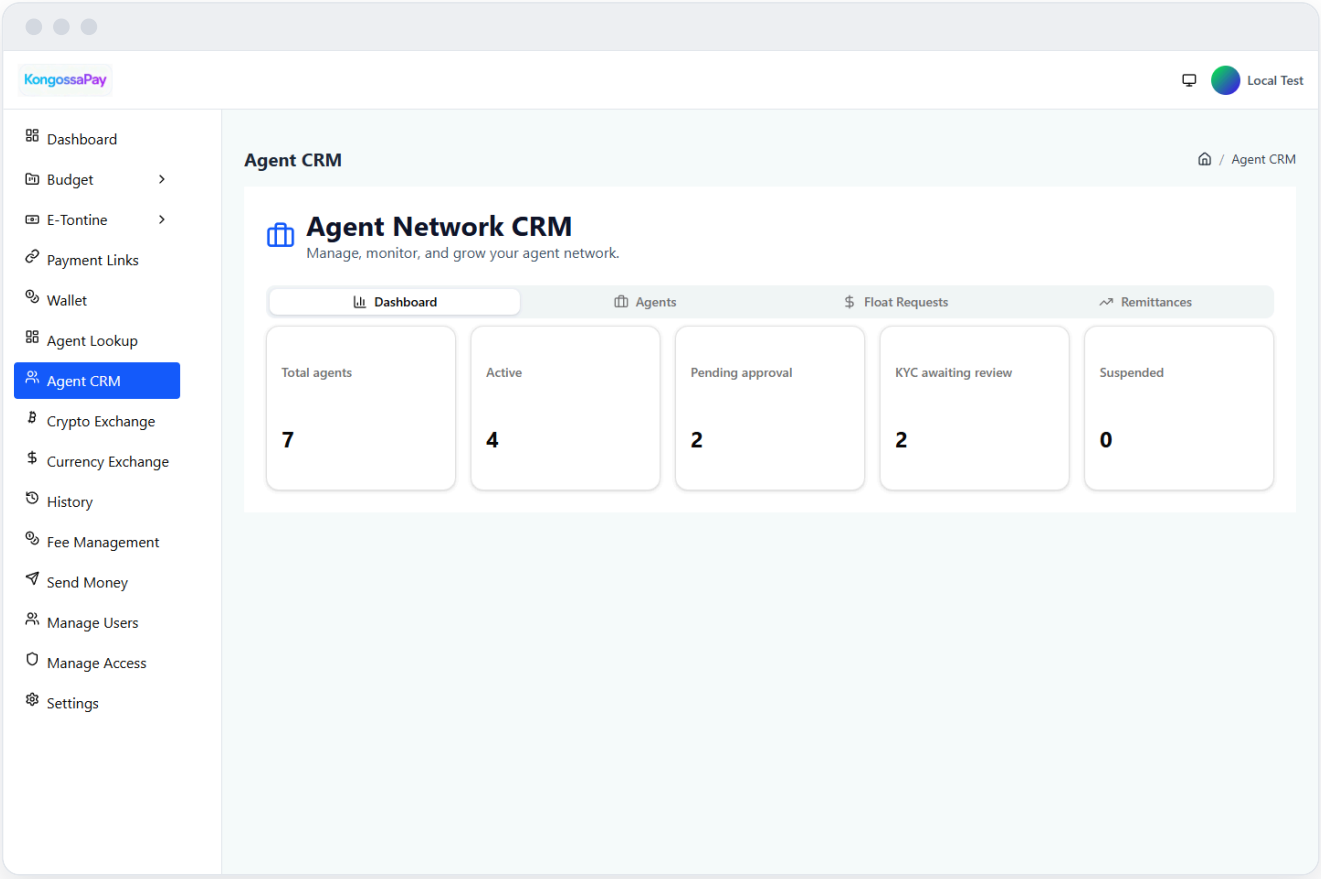

The Admin Panel

Everything the operations team needs to run the agent network — reviewing applications, keeping tabs on active agents, and handling float requests — lives inside the existing Kongossa Pay admin panel, under **Agent CRM**.

14 Agent CRM overview

The landing view for the whole agent network — a snapshot before diving into any one agent.

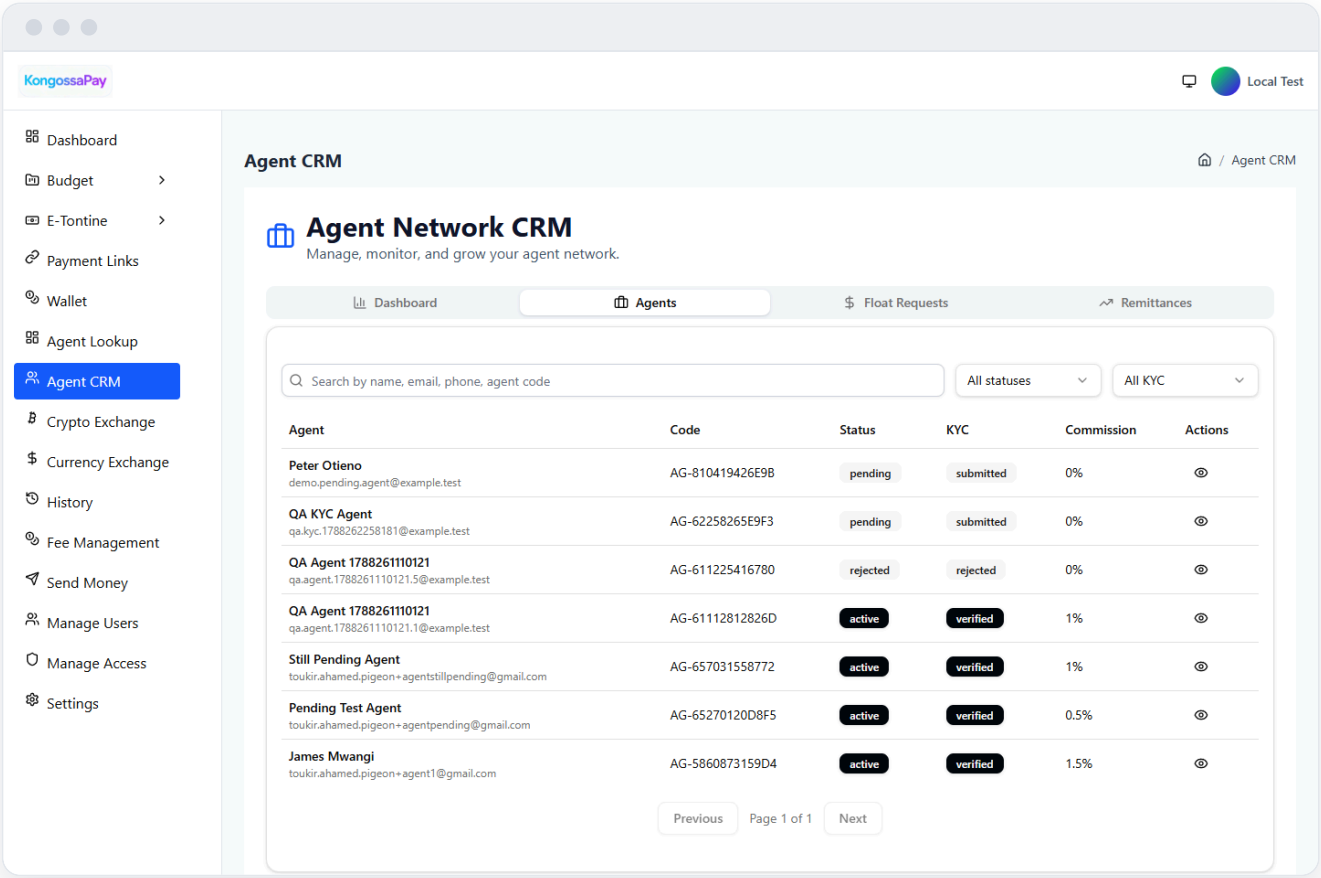

1. From the admin sidebar, open **Agent CRM**.
2. The **Dashboard** tab shows total agents, how many are active, pending approval, awaiting KYC review, and suspended.
3. Three more tabs sit alongside it: **Agents**, **Float Requests**, and **Remittances**.

15 Viewing & searching agents

Every agent who has ever applied, in one sortable list.

1. Open the **Agents** tab.
2. Search by name, email, phone, or agent code using the search box.
3. Filter by **status** (pending / active / suspended / rejected) or **KYC** state.
4. Tap the eye icon on any row to open that agent's full detail.

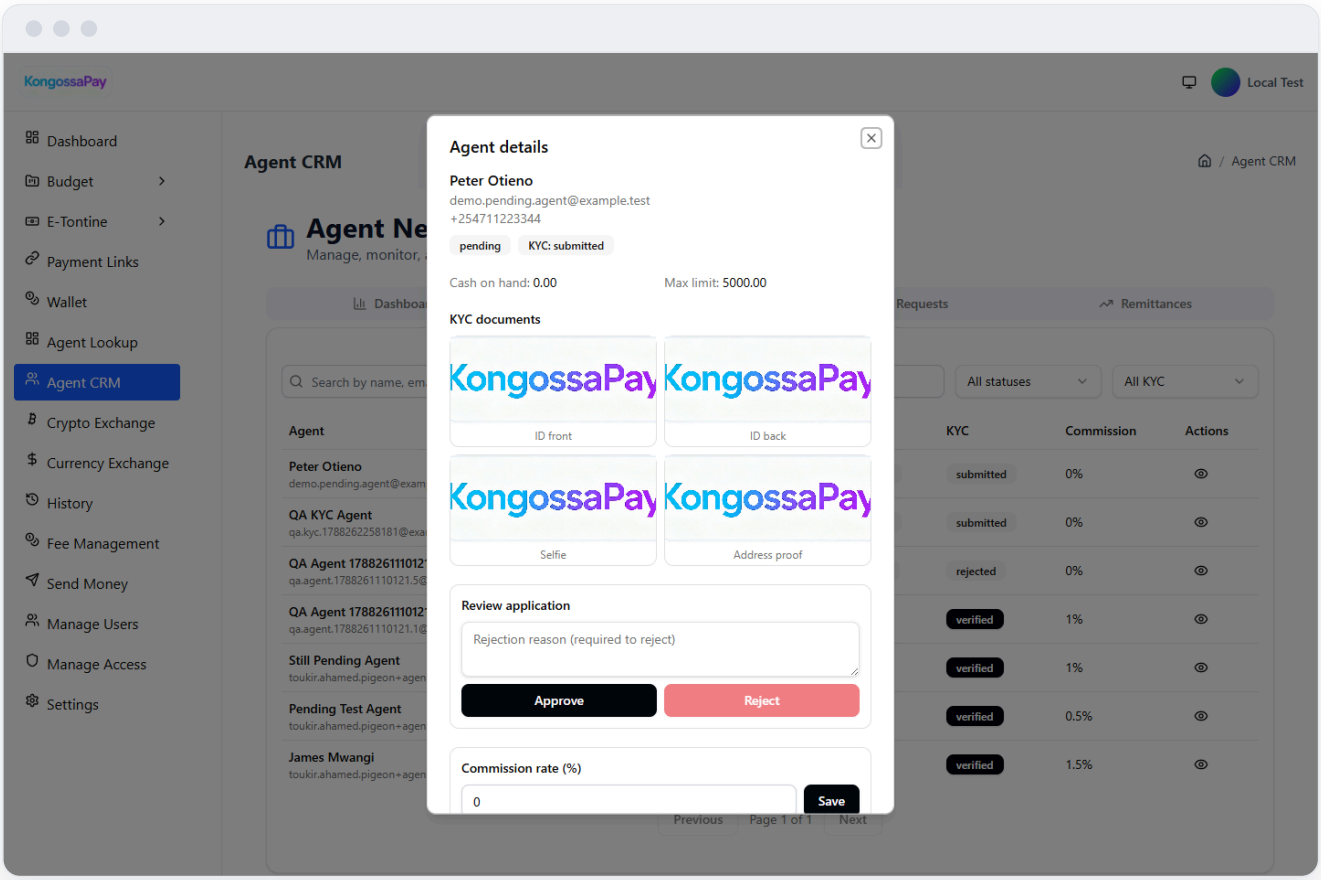

16 Reviewing a new application

The heart of onboarding — checking the submitted ID documents and making the approve/reject call.

1. Open a **pending** agent's detail from the list.
2. Review the four uploaded documents: ID front, ID back, selfie, and proof of address — click any to view full size.
3. To approve: tap **Approve**. The agent is activated immediately and notified by email.
4. To reject: type a reason (required) and tap **Reject**.

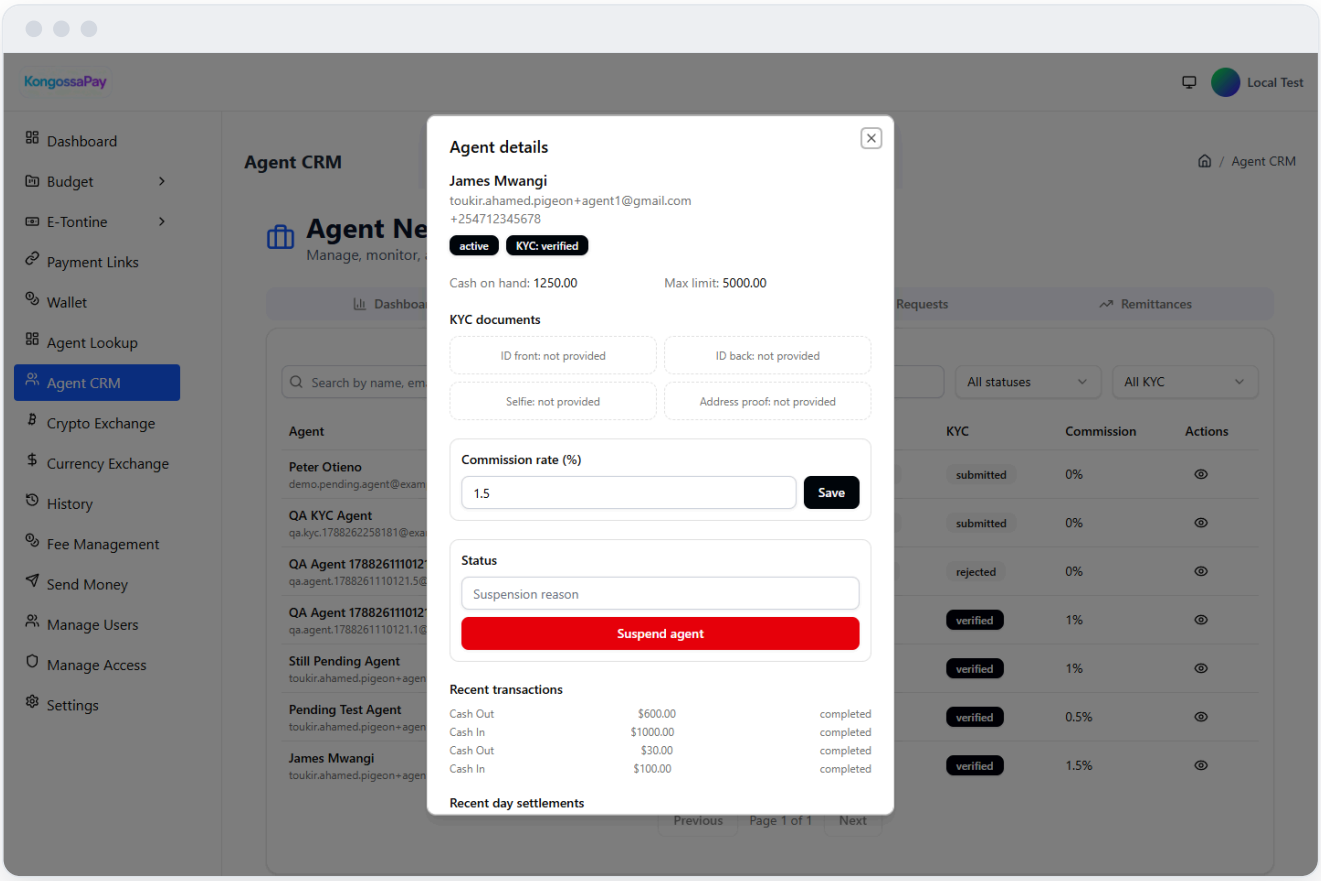

Approving also sets the agent's starting commission rate automatically — adjustable afterwards from the same screen.

17 Managing an active agent

Once approved, the same detail screen becomes the place to adjust commission or take action if something's wrong.

1. Open any **active** agent's detail.
2. Edit the **commission rate** and tap **Save** — it applies to every transaction from that point on.
3. To pause an agent (fraud concern, dormant account, etc.), enter a reason and tap **Suspend agent**.
4. A suspended agent is instantly locked out of the app until **Reactivated** from this same panel.

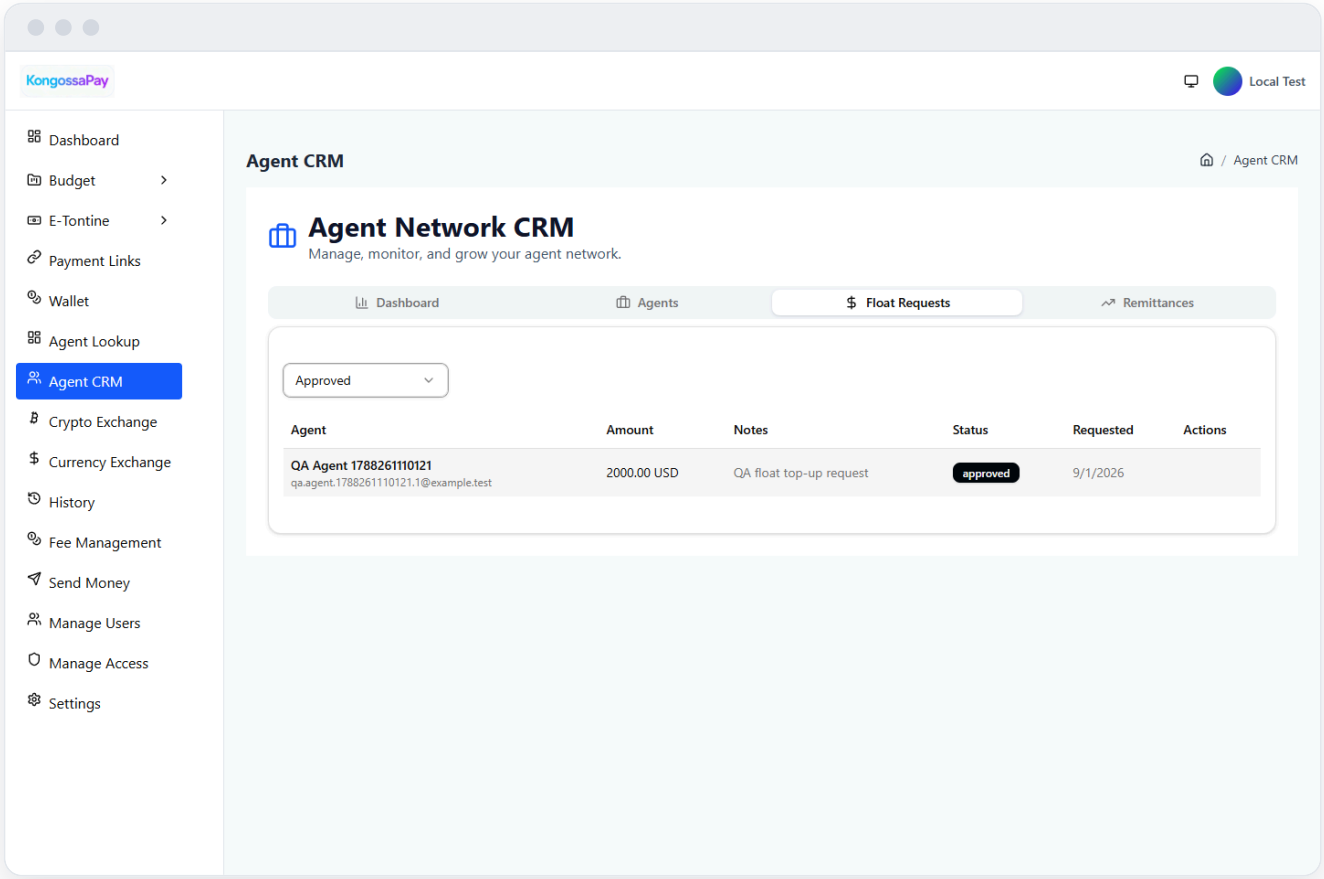

18 Reviewing float requests

When an agent asks for more cash to work with, it lands here for a decision.

1. Open the **Float Requests** tab.
2. Filter by status — Pending is the default working queue.
3. Approve to add the requested amount straight to that agent's cash-on-hand, or reject with a note.

This is a bookkeeping entry, not an automatic wallet transfer — matching how day-settlement variance already works, it assumes the cash is handed over separately and trusts the record.

19 Looking up one agent

A fast path for support conversations: find one specific agent without wading through the full list and filters.

1. Open **Agent Lookup** in the sidebar.
2. Search by name, email, phone, or agent code.
3. Tap a result to open the exact same detail panel used in Agent CRM — recent transactions and day-settlement history included.
